HOW TO READ THIS DOCUMENT

Headhunter: executive overview (2 pages).

Technical evaluator: detailed experience and portfolio.

Blue titles are clickable.

Executive overview — pages 1 and 2: summary, numbers, competencies and career.
Detailed experience — scope, responsibilities and deliveries for each role.
Competencies — technical and behavioral, with level and evidence.
Education and certifications — academic timeline, courses, certifications and languages.
Project portfolio — 57 projects with role, scale, challenge, actions, decisions, results and stack.
Technologies and keywords — terms for search and screening.

01 PROFESSIONAL SUMMARY

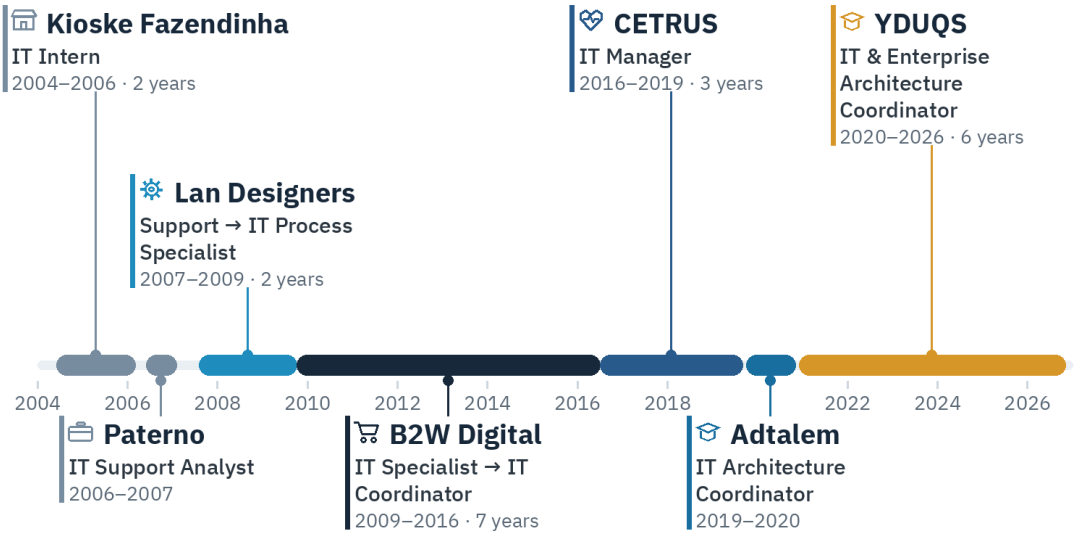

Technology leader and enterprise architect with **20+ years in IT**, **14 in executive and technical leadership**, across education, digital retail, healthcare and services. Experienced in **running entire IT areas** (budget, contracts and board reporting), **leading senior teams**, **enterprise and solution architecture**, legacy modernization, enterprise platforms, **mergers and acquisitions** and AI governance.

20+	14	600+	48
years in technology	years in executive and technical leadership	applications under architecture governance	professionals led in a single team

02 CORE COMPETENCIES

- IT executive leadership
- Enterprise and solution architecture
- Enterprise platforms (SAP, Salesforce, ServiceNow, Databricks)
- Governance, risk and security
- People and senior team management
- Modernization and digital transformation
- Mergers and acquisitions (M&A)
- Data and generative AI

03 CAREER AND KEY DELIVERIES

YDUQS

Dec/2020 – Nov/2026

IT & Enterprise Architecture Coordinator

Education group with 1.4M students · team of 12 senior architects · direct interface with directors and the C-suite

- Built the **IT Master Plan 2026–2030** with the C-suite (AI, data, digital products and obsolescence), the basis for investment decisions.

- Set up the **enterprise architecture practice**: 600+ applications mapped, ARB, TOGAF® and ServiceNow, with a completed LeanIX POC.
- Led the architecture of **legacy modernization** and the adoption of **SAP, Salesforce, ServiceNow and Databricks**.
- Led the technology integration of **6 acquired companies** (UniToledo, QConcursos, HardWork Medicina, Newton Paiva, Edufor and Unifametro).
- Cut **content delivery cost by 90%** by migrating CDNs to Amazon CloudFront, and unified observability on Elastic.
- Architected digital products with direct business impact: hub network grown from **1K+ to 2K+** and **+30%** job opportunities for students.

Adtalem Educacional do Brasil
Oct/2019 – Nov/2020

IT Architecture Coordinator

Ibmec, Damásio and other brands · 100K+ students

- Created the **IT architecture area and the ARB** and led the discovery of the IT ecosystem.
- Led **technical due diligence and integration** in the acquisition by YDUQS, with **BRL 20M/year in IT synergies** identified.

Faculdade CETRUS
Jul/2016 – Sep/2019

IT Manager

Entire IT area · budget of up to BRL 4.5M/year · 45 contracts and 28 vendors · board reporting

- Served as technology focal point in the **Ministry of Education accreditation with a top score (5/5)**.
- Repositioned IT from reactive support to **strategic partner**, with a 30-point gain in satisfaction.
- Modernized network and infrastructure (VMware and Oracle Cloud) with **99.9% uptime**, and implemented an ISMS and continuity plan.

B2W Digital (Americanas S.A.)
Oct/2009 – Jul/2016

IT Coordinator · IT Specialist

IT Governance and Service Desk · teams of up to 48 professionals

- Led the global ITSM selection and the **ServiceNow rollout in 2012**, as one of its first customers in Brazil: **SLA from 47% to 89%** in 90 days and **BRL 1.8M/year** in savings.
- Led the automation committee (**−63% cost and −85% execution time**) and renegotiated contracts with **47% savings** on renewals.

Lan Designers
Aug/2007 – Oct/2009

IT Process Specialist · Support Supervisor · Support Analyst

IT process automation consulting

- Raised the **resolution SLA from 45% to 92%** in Submarino's logistics operation during the merger with Americanas.
- Automated IT and business processes for Deutsche Bank, Rabobank, Banco Votorantim and 3G Capital.

Paterno Assessoria Jurídica · Kioske Fazendinha
Jun/2004 – Feb/2007

IT Support Analyst · IT Intern

- Built the server and network infrastructure, supported the contact center and started my IT career.

04 DETAILED EXPERIENCE

Scope, responsibilities and deliveries by role. Blue project names open the corresponding entry in the portfolio.

YDUQS EDUCACIONAL S/A

yduqs.com.br · Higher Education · Publicly traded (B3: YDUQ3)

> *One of the largest education groups in Latin America (brands: Estácio, Wyden, Ibmec, IDOMED and others). Responsible for building and leading the group-level enterprise, domain and solution architecture practice.*

Scale managed: 1.4M students · 15K+ employees · BRL 5.5B+ annual revenue · 103+ physical campuses · 2K+ distance-learning hubs · 66 higher education institutions · nationwide operation

IT & Enterprise Architecture Coordinator

Dec/2020 – Nov/2026 · 5+ years · São Paulo · Brazil · Remote

Team Leadership, People Management & Culture

- **Direct leadership:** Managed and developed a team of **12 senior architect positions** across enterprise, domain and solution architecture.
- **Careers & mentoring:** Competency matrix, dual career path, individual development plans, performance reviews, talent attraction and a culture of high performance, autonomy and technical accountability.
- **Executive interface:** Strategic partner to directors and VPs — translating business goals into technology strategies, defending budgets and prioritizing the architecture portfolio.

Enterprise Architecture (EA) Governance & Technology Strategy

- **EA practice with TOGAF® 9:** Target and transition architectures, decision governance (ARB), guardrails and reference architectures.
- **EA repository (EA4US, ServiceNow and DevOps):** 600+ applications mapped with capabilities, integrations and obsolescence; LeanIX POC completed, with rollout pending budget.
- **IT Master Plan:** 2026–2030 plan treating technology as business strategy — AI, data, digital products and obsolescence reduction.
- **HR/HCM systems architecture:** AS-IS and TO-BE assessment of the HR and payroll ecosystem — capabilities, fit/gap, benchmark and roadmap.
- **Brazilian tax reform (CBS/IBS):** Architecture for parallel tax regimes across Billing, SAP and the tax engine (Synchro).

Mergers & Acquisitions (M&A)

- Assessment, absorption and standardization of the acquired companies' architectures — UniToledo, QConcursos, HardWork Medicina, Newton Paiva, Edufor and Unifametro — with technical due diligence, target architecture and migration plan.

Strategic Programs & Enterprise Platforms *(details in the Project Portfolio)*

- **Gibraltar — Data Lakehouse:** End-to-end leadership, from RFP to the continuous evolution of the data architecture on Databricks.
- **AI and operations research class allocation:** Integration of SIA with the UniSoma solution and automation, with AWS Step Functions, of a previously manual data flow.
- **New SIA:** Architecture of the new student information system — domains (DDD), monolith strangling and migration roadmap.
- **Billing with Oracle BRM:** Selection and architectural design of the group's billing solution.
- **Payment Broker:** Centralized payments layer, with edge processing (Akamai) and card tokenization in a third-party vault.
- **SAP ERP:** Customization, tax compliance and planning of the ECC to S/4HANA migration (target release 2027).
- **SAVA:** Architecture of the virtual classroom (in-house LMS), developed in partnership with CI&T.
- **Joana (EnsineMe):** Academic content repository built alongside SAVA, integrated with VideoLib (eCine).
- **SIRIUS:** Architecture of the group's academic assessment system.
- **Digital Portals** and **Mobile Apps:** DXP with Strapi for acquisition, documents, e-signature, students and faculty, plus native apps integrated with the ecosystem.
- **Renova:** Led the architecture team on the re-enrollment portal — +10% renewal among students using the "wish list".
- **Hub Portal:** Digital channel for the distance-learning hub network — 100% growth in hubs (from 1K+ to 2K+).
- **Employability Platform:** Student journey connected to career opportunities — over 30% more opportunities.
- **Salesforce (Sales Cloud, Service Cloud, Industries CPQ/Vlocity and Marketing Cloud):** CRM implementation and integration architecture, with a CoE for governed evolution.
- **Digital Service Channels:** Avaya and Talkdesk integrated with Salesforce for omnichannel service.
- **ServiceNow (ITSM, SPM, CMDB, APM):** Architecture and governance of the multi-brand service and IT portfolio platform.
- **Proprietary Academic Products:** Portfolio view and shared standards for the core-business in-house products.

Cloud, Integration & Modernization

- **Legacy Modernization:** Decoupling critical monoliths into microservices, APIs and event-driven architecture.
- **Enterprise Integration Platform:** API-led model with MuleSoft and Amazon API Gateway, standards and API governance.

- **Multicloud:** Architecture and workload migration to AWS, Azure, Oracle Cloud (OCI) and Google Cloud — high availability, DR and compliance.
- **CDNs → Amazon CloudFront:** Migration of content delivery (Vimeo → Edgio → Microsoft CDN classic → Amazon CloudFront), with a **90% reduction in total cost**.

Observability & Security

- **Observability with Elastic:** Logs, metrics, APM and alerts consolidated on the Elastic Stack, retiring Splunk, AppDynamics and Zabbix.
- **SIEM with Microsoft Sentinel:** Led the architecture team on the enterprise SIEM, separating security from observability.

Generative AI & Innovation

- Architecture leadership of the group's Generative and Agentic AI initiatives — architecture committee, AI governance, RAG, agents and POCs with 4 LLM providers.

ADTALEM EDUCACIONAL DO BRASIL S/A

adtalem.com · Higher Education · Publicly traded · Subsidiary of Adtalem Global Education (NYSE: ATGE) · (Acquired by YDUQS in 2020)

IT Architecture Coordinator

Oct/2019 – Nov/2020 · 1 year 2 months · São Paulo · Brazil · Hybrid

(Promoted from Supervisor to Coordinator during the transition to YDUQS.)

> *Responsible for creating the IT Architecture area and for technology integration before and after the M&A. Brazilian operation of Adtalem Global Education, which ran large institutions such as Ibmec, Damásio Educacional and Wyden Educacional.*

Scale managed: 100K+ active students · 2K+ employees · BRL 900M+ annual revenue · 20+ physical campuses · 180 distance-learning hubs · 13 higher education institutions and test-prep businesses · nationwide operation backed by an international group (Adtalem Global Education)

Strategic Projects *(details in the Project Portfolio)*

- **IT Architecture area and ARB:** Architecture reference model, processes, methodologies and tools for the new area, aligned with YDUQS standards, and creation of the Architecture Review Board (ARB).
- **IT ecosystem discovery and assessment:** Survey of applications, integrations, data and infrastructure, with a maturity assessment and a technology evolution roadmap.
- **Adtalem → YDUQS M&A — due diligence and systems integration:** Central role in the technical due diligence and the systems transition of the acquisition (BRL 2.2 billion transaction).
- **Integration architecture and digital culture:** Centralized service layer (API-led, ESB/iPaaS) replacing point-to-point integrations, and promotion of a Lean IT culture.

FACULDADE CETRUS

cetrus.com.br · Higher Education and Healthcare · Mid-sized · (Acquired by the edtech Sanar in 2022)

IT Manager

Jul/2016 – Sep/2019 · 3 years 3 months · São Paulo · Brazil · On-site

> *Responsible for all IT across 5 campuses in 3 states and for the top-score Ministry of Education accreditation, focused on open and regulated programs in healthcare (medical subspecialties such as ultrasound, fetal medicine and obstetrics and gynecology). A national reference in medical postgraduate and specialization programs, with strong on-site teaching, hands-on simulation and digital learning platforms.*

Scale managed: 5.4K+ students/year · 450+ employees · BRL 50M+ annual revenue · 5 physical campuses · 50+ modular courses and postgraduate programs · 300+ workstations · 50+ physical, virtual and cloud servers · 150TB+ of data · 18 critical systems · 35 databases · 45 contracts · 28 strategic vendors · focus on hands-on on-site training and official Ministry of Education accreditation · nationwide operation

Multidisciplinary IT Management:

- *Executive leadership of the company's entire IT structure (software development, infrastructure and networks, student and faculty support, BI and academic systems).*
- *Key contact in the Ministry of Education accreditation — top score (5/5) — with a direct impact on the institution's commercial viability and reputation.*
- *Raised IT's perceived value with the strategic board — from a reactive support area to a proactive strategic one.*

Strategic Projects *(details in the Project Portfolio)*

- **Ministry of Education accreditation with a top score (5/5):** Executive technology focal point in preparing the institution for the evaluation — a complete overhaul of the technology environment, culminating in the top score.
- **IT governance, risk and information security:** Strategic planning and a BRL 4.5M/year budget (CAPEX and OPEX), management of 45 contracts and 28 vendors, IT governance, ISMS and business continuity plan.
- **Network and infrastructure modernization:** Virtualization, cloud migration (Oracle), secure networks and VoIP telephony at every campus — 99.9% uptime.

- **New administrative and academic ecosystem:** Selection, negotiation and coordination of the rollout of SAP, Oracle, Power BI, Lyceum, Moodle, Avaya and Cisco/Vimeo, with automated enrollment, certificates and a student portal.

B2W DIGITAL S/A (AMERICANAS S/A)

ri.americanas.io · Retail and E-commerce · Publicly traded · (B3: BTOW3 · now Americanas S.A., B3: AMER3)

> *Responsible for coordinating IT governance, automating IT service management processes and driving self-service efficiency in a critical operation at Brazil's largest e-commerce group (Americanas, Submarino, Shoptime).*

Scale managed: 25K+ employees · 1K+ IT engineers · 1K+ servers · 10K+ workstations · 200+ critical systems · 300+ databases · 15+ contracts · 10+ strategic vendors · nationwide operation

Role 1 — IT Coordinator

Oct/2010 – Jul/2016 · 5 years 10 months · São Paulo · Brazil · On-site

IT Leadership & People Management

- *Led the IT Governance (8 people) and Service Desk (40 people) teams — the latter evolving into self-service.*
- *Vendor contract management: 47% direct annual savings on renewals.*
- *Led the Process Automation Committee, delivering a 63% cost reduction and an 85% reduction in execution time.*

Pioneering ServiceNow Implementation in Brazil

- *ITSM tool selection with an RFP of 118 requirements and a proof of concept with 3+ finalists — choice: ServiceNow (first ServiceNow Brazil contract).*
- *Led the specification, architecture design and implementation of the ServiceNow** platform (one of the first major success cases in the country).**
- *Created the self-service portal integrating the IT and business service catalog (2.5K+ items), request automation and complex approval workflows.*
- *Led the corporate process automation and IT self-service program, resulting in reduced operational headcount and audited savings of BRL 1.8M/year.*

Processes, Strategic KPIs and SLA Improvement (47% → 89%)

- *Process mapping (current and target state) with maturity assessment: ITIL, COBIT, ISO 20000 and ISO 27000.*
- *Service level management (SLA) raised from 47% to 89% in 90 days — process restructuring and KPI-driven management.*
- *Complete redesign of service desk processes based on ITIL v3** and **COBIT**, restructuring support tiers (L1, L2, L3), critical incident, problem and change management (CAB).**
- *Restructured service catalog with 2.5K+ service items with SLAs, workflows and KPIs (IT, HR, procurement and facilities).*

Role 2 — IT Specialist

Oct/2009 – Oct/2010 · 1 year 1 month · São Paulo · Brazil · On-site

Administration of ITSM systems and rollout of the initial IT governance processes.

- *Administered IBM Maximo, ASK Business Desk, Redmine, Nagios and SharePoint.*
- *Rollout of ITIL processes: service operation, change and release management, and IT configuration and asset management.*
- *Evolved incident management and request fulfillment.*
- *Reviewed the IT service catalog: SLAs, workflows, OLAs and approval levels.*
- *Assessed 20+ ITSM tools to replace the legacy platform, laying the groundwork for the later choice of ServiceNow.*

LAN DESIGNERS

landesigners.com.br · IT Consulting and Services · Mid-sized · Process Automation

> *Consulting firm specialized in IT process automation on the ASK Business Desk platform. Clients: 3G Capital, Deutsche Bank, Rabobank, B2W Digital, Banco Votorantim and others.*

Clients served: 3G Capital · Audatex · B2W Digital · Banco Votorantim · Café do Ponto · Deutsche Bank · Rabobank · nationwide operation

Role 1 — IT Process Specialist

Mar/2008 – Oct/2009 · 1 year 8 months · São Paulo · Brazil · On-site

Automation of IT and business processes for large clients in the financial, retail and services sectors.

- *IT process automation with ASK Business Desk: mapping and automation of ITIL processes, POC/POV for pre-sales, and platform implementation and support.*

Role 2 — IT Support Supervisor

Nov/2007 – Mar/2008 · 5 months · São Paulo · Brazil · On-site

IT technical support for Submarino's logistics operation during the merger with Americanas (which created B2W).

- *Submarino + Americanas merger: resolution SLA from 45% to 92%, migration of accounts and technology resources, and logistics industrial automation projects.*

Role 3 — IT Support Analyst

Aug/2007 – Nov/2007 · 4 months · São Paulo · Brazil · On-site

IT technical support for Submarino's logistics operation — maintenance of networks, equipment and systems.

- *Migration of technology resources during a corporate restructuring.*
- *Technical, operational and user manuals for the knowledge base.*

PATERNO ASSESSORIA JURÍDICA

paterno.com.br · Legal Services · Small business · Legal advisory · Collections · regional operation

IT Support Analyst · Part-time

Jun/2006 – Feb/2007 · 9 months · São Paulo · Brazil · On-site

> *Responsible for the data processing center and technology support for the contact center and the collections and legal advisory administrative team.*

Data Processing, Support and Network Administration

- *Bulk data generation for correspondence, billing queries and support of the technology estate.*
- *Technical support for 40+ contact center seats (outbound and inbound), 10 administrative managers and 4 executives (VIP) — applications, systems, infrastructure and telephony.*
- *Server and network infrastructure build-out: file, domain (Active Directory), database (SQL Server) and network services, with high availability and redundant links.*

KIOSKE FAZENDINHA

kioskefazendinha.com.br · Retail and Services · Small business · Tourism and Events · regional operation

IT Intern

Jun/2004 – Mar/2006 · 1 year 10 months · São Paulo · Brazil · On-site

> *First professional experience in IT. Responsible for the company's IT support, configuration and maintenance, administrative documents and social media.*

Broad role in infrastructure, web development and digital communication

- *Website setup, business computerization and local network configuration.*
- *Digital contracts, business cards and promotional flyers.*
- *Social media management and digital campaigns to attract customers.*

VOLUNTEER WORK — CONGREGAÇÃO CRISTÃ NO BRASIL

congregacao.org.br · Nonprofit · Christian nonprofit organization · Social services · Brás headquarters & Embu das Artes region · São Paulo, Brazil

IT Manager

Feb/2016 – Present · 10+ years · São Paulo · Brazil · Hybrid

> *Volunteer management of information and communication technology (ICT) for the Brás headquarters and the Embu das Artes region, leading technology architecture and governance. Responsible for the entire technology area of the Embu das Artes region.*

Scale managed: 12K+ active members · 6 administrative units · 90+ churches · 600+ general contributors · 20+ direct contributors · BRL 600M+ annual budget for the area · nationwide operation · regional responsibility

- *Member of the headquarters governance, architecture and security committee.*
- *Hybrid infrastructure and collaboration — led the administration of a hybrid infrastructure: Azure, SharePoint, Office 365, Windows and Linux servers (virtualization, domain, file server, networks), switches, routers and firewalls.*
- *Management of information and communication technology services for the region's 6 administrative units and 90+ churches.*
- *Support management for hundreds of end users and training of knowledge multipliers.*
- *IT asset management, purchasing specifications, vendor management and response to internal and external audits.*
- *Information security, access control and service continuity.*
- *Regional IT Master Plan: preparation and execution of the region's technology master plan.*

Administrative Contributor

Nov/2008 – Oct/2020 · 12 years · Unit BR-22-3001

- *Local unit administration: cost control, project management, cash flow, accounting records, logistics and volunteer management.*

05 COMPETENCIES

TECHNICAL COMPETENCIES (Hard Skills)

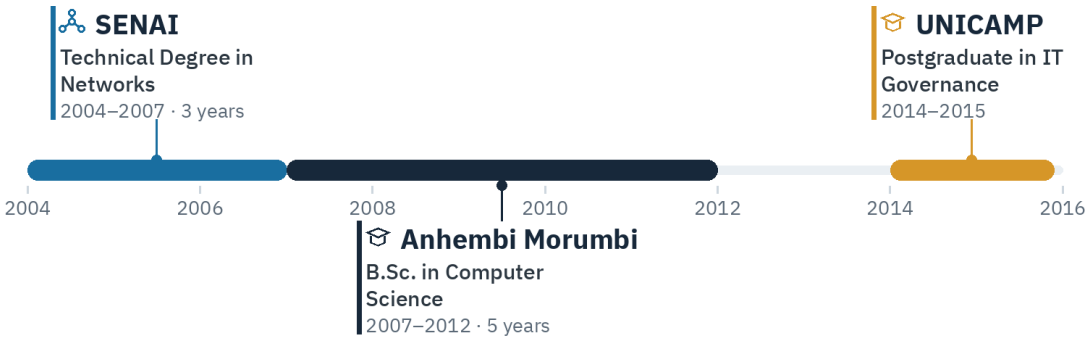

Grouped by domain and ordered by relevance to the profile and target roles.

Domain	Competency	Level	Evidence
Architecture & Strategy	Enterprise Architecture (TOGAF® 9)		EA practice: ADM, business capabilities, target and transition architectures, EA4US, guardrails and a repository with a LeanIX POC (YDUQS)
Architecture & Strategy	IT Strategic Planning (IT Master Plan)		IT Master Plan 2026–2030 with the C-suite (YDUQS) · regional plan (volunteer)
Architecture & Strategy	Digital Transformation & Legacy Modernization		Modernization program: cloud-native, microservices and API-first (YDUQS)
Architecture & Strategy	Platform Selection, RFP & Make or Buy		ServiceNow (20+ tools, 118 requirements, B2W) · Gibraltar · Oracle BRM · HR/HCM · TCO/ROI (YDUQS)
Architecture & Strategy	Solution Architecture		New SIA, Billing and proprietary academic products: microservices, DDD and cloud-native
Architecture & Strategy	Digital Product Architecture		SAVA, Joana, Hub Portal, apps and portals (YDUQS)
Architecture & Strategy	Integration Architecture		MuleSoft and Amazon API Gateway (1K+ APIs), Kafka (EDA) and Payment Broker (YDUQS · Adtalem)
Architecture & Strategy	Data Architecture		Gibraltar: enterprise Data Lakehouse on Databricks, from RFP to continuous evolution (YDUQS)
Architecture & Strategy	Mergers & Acquisitions (M&A)		Due diligence and Adtalem → YDUQS integration · absorption of companies acquired since 2020
Architecture & Strategy	Generative AI — Architecture & Governance		AI committee, governance, RAG and POCs with 4 LLM providers (YDUQS)
Leadership & Management	IT Executive Leadership		Entire IT area reporting to the board, BRL 4.5M/year (CETRUS) · IT Master Plan and C-suite interface (YDUQS) · up to 48 people (B2W)
Leadership & Management	Technical Team Leadership		12-position senior architecture team, dual career path and mentoring (YDUQS) · 40+ professionals (B2W)
Leadership & Management	Stakeholder Management & Executive Communication		Directors, VPs and C-suite · investment committees · Ministry of Education accreditation
Leadership & Management	Portfolio & Budget Management (CAPEX/OPEX)		Budget of up to BRL 4.5M/year (CETRUS) · architecture portfolio prioritization (YDUQS)
Leadership & Management	Vendor & Contract Management		45 contracts and 28 vendors (CETRUS) · 47% savings on renewals (B2W)
Leadership & Management	Project Management (PMBOK + Agile)		Scope, schedule, cost and risk · CSPO®
Governance, Services & Security	IT Service Management (ITIL / ITSM)		SLA from 47% to 89% in 90 days and BRL 1.8M/year · catalog with 2.5K+ items (B2W) · ServiceNow (YDUQS)
Governance, Services & Security	IT Governance (COBIT · ISO 20000)		Governance framework and catalog (B2W) · GRC (CETRUS)
Governance, Services & Security	Process Automation (BPM)		Automation committee: −63% cost and −85% time (B2W) · ITIL automation (Lan Designers)
Governance, Services & Security	Information Security, SIEM & Continuity		ISMS and business continuity plan (CETRUS) · SIEM with Microsoft Sentinel (YDUQS)
Governance, Services & Security	Observability & SRE (Elastic)		Consolidation on Elastic, retiring Splunk, AppDynamics and Zabbix (YDUQS)
Governance, Services & Security	Regulatory & Tax Compliance		Brazilian tax reform · LGPD · PCI DSS · Ministry of Education accreditation
Governance, Services & Security	Billing & Payments		New billing with Oracle BRM · payment broker with tokenization (YDUQS)
Platforms & Technologies	ServiceNow		ITSM, SPM, CMDB and APM (YDUQS) · one of the first customers in Brazil (B2W, 2012)
Platforms & Technologies	SAP ERP		Tax and academic adjustments and S/4HANA migration planning (YDUQS)
Platforms & Technologies	Salesforce		Sales, Service, Industries CPQ and Marketing Cloud · CoE (YDUQS)
Platforms & Technologies	Cloud (AWS · Azure · Google Cloud · Oracle Cloud)		Multicloud · CDN on Amazon CloudFront, −90% cost · VMware (CETRUS)

BEHAVIORAL COMPETENCIES (Soft Skills)

Competency	Level	Evidence
Servant and Transformational Leadership		12-position team (YDUQS) and 40+ IT professionals (B2W) — autonomy, trust and shared purpose
People Development		Building, mentoring, development plans and dual career path for the architecture team over 5+ years (YDUQS) · multiplier training (volunteer)
Business Acumen		Business-driven IT Master Plan · BRL 20M/year in IT synergies mapped · −90% delivery cost · M&A decisions
Strategic Vision		ServiceNow in Brazil in 2012, Data Lakehouse, Generative AI, long-term roadmaps and IT Master Plan
Change Management		M&A integrations, ServiceNow adoption, IT transformation and migrations with no impact on students
Systems Thinking		End-to-end view — business, processes, data, applications and infrastructure
Results Orientation		BRL 1.8M/year and SLA from 47% to 89%, −63% process costs, top accreditation score, −90% CDN cost
Executive Communication and Influence		C-suite presentations, investment and prioritization committees, M&A decisions and accreditation
Partnerships and Ecosystems		CI&T, UniSoma, eCine, integrators and acquirers · multiple vendors per platform
Negotiation		Contract renegotiation (47% savings), RFPs and management of multiple integrators
Conflict Management and Mediation		Aligning IT and business in mergers, migrations and portfolio consolidation
Data-Driven Decision Making		KPIs, TCO/ROI analysis and executive dashboards (Power BI and Databricks AI/BI)
Innovation Culture		Generative AI, strategic POCs and continuous ecosystem modernization
Adaptability and Resilience		Multiple industries, mergers and acquisitions, continuous technology and organizational change

06 EDUCATION, CERTIFICATIONS AND LANGUAGES

ACADEMIC EDUCATION

Postgraduate Specialization in Information Technology Governance — UNICAMP · 2014–2015

Courses: IT Governance Dimensions · IT Strategic Planning · IT Project Design · Management Models · Information Management · Knowledge Management · Software Product Quality · IT Service Management · Finance and Cost Management · Process Engineering · Technology Innovation Management · Process-Based Maturity Models · IT Project Management · IT Security and Continuity Management

Skills developed: Strategic assessment of systems and business processes; defining and tracking IT governance KPIs; designing and coordinating complex projects; optimizing support to business processes with a focus on quality, productivity and ethics.

B.Sc. in Computer Science (software development emphasis) — Universidade Anhembi Morumbi · 2007–2012

Courses: Computer Architecture · Operating Systems · Software Engineering · Software Quality and Testing · Data Structures · Databases · Object-Oriented Modeling · Computer Networks · Distributed Systems · Artificial Intelligence · Compilers · Mobile Computing and Graphics · Entrepreneurship

Skills developed: Diagnosing complex problems and coordinating computing projects; selecting, implementing and maintaining enterprise systems; advanced software development.

Technical Degree in Information Technology (computer networks emphasis) — SENAI Suíço-Brasileiro · 2004–2007

Courses: Programming Logic · Databases · Microcomputer Maintenance · Operating Systems · Local Area Networks · Internet Administration · Web Programming · Network Security · Structured Cabling · Network Projects

Skills developed: Designing, implementing and maintaining local networks and structured cabling; hardware and OS diagnostics; network security routines; programming logic, data modeling and web applications.

YDUQS

P01 Enterprise Architecture Practice

YDUQS · 2021 – 2026 · Strategy & Architecture

Role Head of the Enterprise Architecture practice — setup, governance and technical direction of the team

Scale 12 senior architects (enterprise, domain and solution) · 600+ applications mapped · business capabilities across 8 domains · rollout roadmap in 4 horizons · 30+ standards and guardrails published

Challenge An education group growing organically and through M&A, with a heterogeneous systems portfolio, no single view of capabilities, applications and dependencies, and no formal governance of technology decisions.

ACTIONS

- Set up the practice with TOGAF® (ADM) and ArchiMate across three disciplines: enterprise, domain (data, AI, infrastructure, integration, security, software engineering, end-user computing) and solution architecture
- Three-level business capability catalog with maturity and coverage heat maps
- Led the committee aligning business processes, value chain and technology capabilities
- Architecture principles, standards, policies and guardrails applied in project reviews
- Target architectures, transition states and evolution roadmaps by domain
- Governance ritual (ARB) integrated into the investment cycle and the delivery squads
- Corporate API-first, cloud-native and event-driven architecture guidelines, applied by solution projects under ARB review
- Catalog of guardrails and standards by domain — security (OWASP ASVS), applications (12-Factor App) and integration contracts (OpenAPI and AsyncAPI) —, reusable reference architectures, ARB review checklists and an exceptions register with deadlines and remediation plans

KEY DECISIONS

- Federated model: domain and solution architects connected to Enterprise Architecture
- Business capabilities, not systems, as the planning unit
- ADR (Architecture Decision Record) mandatory for relevant decisions
- Guardrails as mandatory minimum rules and standards as recommendations, with formal, time-boxed exceptions

RESULTS

- Became the reference for technical teams and squads, supporting technology investment decisions as a strategic partner to the C-suite
- 100% of strategic projects reviewed by architecture before approval
- −30% redundant applications identified and prioritized for retirement
- Consistent technical decisions across squads and vendors

STACK

Languages ArchiMate 3.2, BPMN 2.0, UML 2.5, C4 Model; PlantUML, Mermaid, Structurizr DSL

Platforms EA4US (repository), SAP LeanIX (POC), ServiceNow (APM), Azure DevOps

Standards TOGAF 9.2, Zachman Framework, ISO/IEC/IEEE 42010, BIZBOK (business capabilities), APQC PCF, IT4IT, COBIT 2019, Strangler Fig, Domain-Driven Design, architecture principles and guidelines, reference architecture, ADR

Practices Capability-based planning, heat maps, architecture governance (ARB)

Ecosystem ServiceNow, SAP LeanIX, Microsoft

P02 Generative and Agentic AI Initiatives

YDUQS · 2024 – 2026 · Data & AI

Role AI architecture lead — committee, governance, platforms and Generative and Agentic AI POCs

Scale Group with 1.3M+ students · dozens of prioritized POCs · 4 LLM providers evaluated (OpenAI, Anthropic, Google and Amazon Bedrock)

Challenge Adopting Generative and Agentic AI at scale in higher education — high transformative potential and growing regulation — without compromising privacy (LGPD), ethics or traceability.

ACTIONS

- Data & AI readiness principles and security and privacy guidelines for LLMs
- Comparative assessment of AI platforms (quality, cost, latency, data residency and governance)
- RAG reference architecture (ingestion, embeddings, vector search, reranking and guardrails) and prototyping of autonomous agents
- POCs: personalized student journeys, support for academic content production and service automation
- AI governance framework — ethics, privacy, traceability and usage limits — aligned with ISO/IEC 42001, NIST AI RMF and LGPD

KEY DECISIONS

- AI gateway layer for multi-model routing, cost control and auditing
- RAG over governed data (Gibraltar) before any fine-tuning
- Human-in-the-loop for sensitive academic and service decisions

RESULTS

- AI governance framework established as a prerequisite for responsible scaling
- 13 POCs evaluated, 8 approved for production
- −40% average handling time in AI-assisted flows during the POCs

STACK

Languages Python 3.11/3.12, TypeScript

Platforms OpenAI API, Anthropic (Claude), Google Vertex AI (Gemini), Amazon Bedrock, Databricks (Vector Search, Genie), Azure

Standards RAG, MCP (Model Context Protocol), OWASP Top 10 for LLM, ISO/IEC 42001, NIST AI RMF, LGPD

Practices LLMOps/AgentOps, model evaluation (evals), guardrails, AI FinOps

Ecosystem Microsoft, AWS, Google, Databricks, OpenAI, Anthropic

P03 M&A — Assessment, Absorption and Standardization of Acquired Companies

YDUQS · 2020 – 2026 · Strategy & Architecture

Role M&A architecture lead — technical due diligence, target architecture and absorption readiness

Scale Adtalem (2020), UniToledo (2020), QConcursos (2021), HardWork Medicina (2022), Newton Paiva and Edufor (2024) and Unifametro (2025) · hundreds of relevant systems assessed per company · absorption windows of 3 to 9 months

Challenge Absorbing companies and institutions with very different architectures — from a fully digital edtech to on-campus institutions — while preserving operational continuity and synergies.

ACTIONS

- Pre-acquisition technical due diligence: systems, integrations, data, infrastructure, security and technical debt
- Current-state assessment, target architecture and standardization rules (group guardrails, principles and standards)
- Application rationalization (TIME model: tolerate, invest, migrate, eliminate)
- Wave-based migration and consolidation plan: identity (SSO), collaboration, data, finance and academic
- Scenario analysis with technical, financial and operational trade-offs for the executive decision
- Absorption of UniToledo (completed in 2020) run in parallel with the Adtalem integration

KEY DECISIONS

- Standardize what creates synergy (identity, data, finance) and preserve what differentiates (e.g., the edtech's adaptive technology)
- Minimum viable Day 1: operational continuity first, consolidation later
- Dependencies and transitional services made explicit before migration

RESULTS

- Absorptions prepared with target architectures and standardized to the group's ecosystem
- −55% redundant applications per acquisition after rationalization
- 100% of acquisitions met Day-1 identity and security requirements

STACK

Languages ArchiMate 3.2, BPMN 2.0, SQL (data loads and ETL)

Platforms Microsoft Entra ID (SSO), Azure, AWS (landing zones), Databricks, SAP ERP, Salesforce, Microsoft 365 (collaboration)

Standards TOGAF 9.2, ISO/IEC 27001:2022, LGPD

Practices Technical due diligence, Day-1 readiness, application rationalization (TIME), integration PMO

Ecosystem Salesforce, SAP, Microsoft, AWS, Databricks

P04 CDN Evolution and Migration to Amazon CloudFront

YDUQS · 2022 – 2025 · Cloud, Security & Ops

Role Architecture lead from concept to migration — solution choice, business case and execution

Scale Video and academic content delivery to 1.3M+ students · ~1 PB of content · tens of millions of requests per month

Challenge Video and academic content delivery depended on a succession of CDN providers, with high costs and uneven delivery quality.

ACTIONS

- Designed and assessed alternatives at each stage (make-or-buy, TCO and CDN benchmarks), with a technical POC and business case that led to the final choice of Amazon CloudFront
- Moved videos from Vimeo to in-house delivery over CDN, with adaptive streaming (HLS)
- Successive transitions Edgio → Microsoft CDN (classic) → Amazon CloudFront with no interruption for students
- Target architecture with Amazon S3 as origin and Amazon CloudFront as CDN, with Origin Shield, cache policies and signed URLs for protected content
- Storage classes by access pattern (S3 Intelligent-Tiering and Glacier) and cost tracking (FinOps), integrated with SAVA and Joana (EnsineMe content repository)

KEY DECISIONS

- Moved away from providers being discontinued to a hyperscaler CDN, eliminating continuity risk
- Single S3 origin and single CDN, with no fragmentation of contracts or cache
- Wave-based migration with coexistence, prioritizing the highest-traffic content

RESULTS

- 90% reduction in total content delivery cost
- Lower latency in delivering videos and content to students
- Delivery and availability SLAs above those of previous CDNs
- 100% of content migrated with no downtime for students

STACK

Languages Python (migration automation), JavaScript (CloudFront Functions)

Platforms Amazon CloudFront (Origin Shield), Amazon S3 (Intelligent-Tiering, Glacier), AWS DataSync, S3 Batch Operations, AWS WAF, Amazon CloudWatch; previously: Vimeo, Edgio, Azure CDN Standard from Microsoft (classic)

Standards HLS, HTTP/2, HTTP/3, TLS 1.3, signed URLs and cookies

Practices FinOps, wave-based migration, data lifecycle management

Ecosystem AWS · replaced: Vimeo, Edgio, Microsoft (CDN classic)

P05 New SIA — Student Information System

YDUQS · 2024 – 2026 · Digital Products

Role Architecture lead for the new SIA — domains, migration strategy and ecosystem integration

Scale 1.3M+ students · 10+ domains (DDD) · 100+ integrations with satellite systems

Challenge Replacing the legacy monolith behind the core educational operation without disrupting a regulated operation (Ministry of Education), while moving support functions to specialist systems.

ACTIONS

- Domain definition with DDD (context mapping), focused on the core academic domain
- Monolith strangling strategy (Strangler Fig), with an anti-corruption layer and legacy/new coexistence
- Moved functions to specialist systems: service in Salesforce and finance in Oracle BRM
- Selection of technologies, components, platforms and vendors
- Integration architecture with satellites (SAP ERP, Salesforce, Databricks, SAVA) and a wave-based migration roadmap
- AI embedded in product design, documentation, development and evolution

KEY DECISIONS

- Incremental migration by domain, with legacy and new coexisting (no big bang)
- Domain events to propagate academic changes to satellites
- Academic master data with a single owner (SIA), consumed through APIs

RESULTS

- Incremental migration with no disruption to the academic core, with independent evolution per domain
- AI-assisted development productivity above 5x
- −40% direct dependencies between legacy and satellites after the integration layer
- 12 domains mapped and 3 in production in the first wave

STACK

Languages TypeScript 6, JavaScript, SQL; React 19, Node.js 24 LTS

Platforms Oracle Database 19c, Oracle Autonomous Database, Apache Kafka 3.x, Amazon API Gateway, MuleSoft (Anypoint Platform), Salesforce, Oracle BRM 15, SAP ECC, Databricks

Standards DDD, Strangler Fig, EDA, OpenAPI 3.1, AsyncAPI, OAuth 2.0/OIDC

Practices CI/CD, observability (OpenTelemetry), contract testing, ADR

Ecosystem Salesforce, MuleSoft, SAP, Oracle, AWS, Databricks

P06 Gibraltar — Enterprise Data Lakehouse

YDUQS · 2022 – 2024 · Data & AI

Role Technical sponsor and Lakehouse architecture lead — from RFP to continuous evolution

Scale Domains: academic, finance, operations, students and faculty · 500+ managed tables · 200+ BI users · 20+ pipelines

Challenge Data scattered across legacy and satellite systems, with no catalog or data contracts, limiting analytics, student retention (early churn) and AI use cases.

ACTIONS

- Architecture requirements and RFP, with vendor assessment and technical POCs
- Initial choice of Databricks + Azure (PaaS) as an accelerated central platform, with a planned future review towards IaaS + open source for ROI
- Lakehouse architecture (Delta Lake, Bronze/Silver/Gold layers) with ingestion pipelines from multiple domains
- Centralized data catalog (Unity Catalog) and data contracts between producer and consumer teams
- Evolution cycles (PDCA); replacement of Power BI and Alteryx with Databricks AI/BI + Genie Space + Workflows; Databricks integration with Salesforce Data 360; Databricks Lakebase POC for Student Progress

KEY DECISIONS

- Accelerated PaaS at the start, with a review trigger towards IaaS + OSS tied to TCO and ROI
- Data contracts as a precondition for onboarding a domain
- Centralized governance in the catalog, with access by domain

RESULTS

- Initial business cases on early churn reduction and smart pricing delivered successfully
- Planned evolution: advanced analytics integrated with Salesforce Data 360, machine learning and Generative AI use cases
- −40% lead time to make a new dataset available (from weeks to days)
- 95% of critical data assets cataloged with owner and classification

STACK

Languages SQL, Python 3.11/3.12; PySpark (Apache Spark 3.5)

Platforms Databricks Runtime LTS 12.2 → 15.4, Delta Lake, Unity Catalog, Lakeflow Declarative Pipelines, Workflows, AI/BI, Genie Space (replacing Power BI and Alteryx), Lakebase (POC), Azure (ADLS Gen2), Salesforce Data 360

Standards Medallion architecture, data contracts, open formats (Delta Lake, Apache Iceberg)

Practices DataOps, CI/CD (Azure DevOps), IaC (Terraform), FinOps

Ecosystem Databricks, Microsoft, Salesforce

P07 Legacy Systems Modernization Program

YDUQS · 2021 – 2026 · Platforms & Integration

Role Program lead on the architecture side — target architectures, transition states and governance

Scale Dozens of legacy systems · quarterly waves · 100+ APIs published

Challenge A tightly coupled legacy portfolio with high change costs, technology obsolescence and dependence on critical monoliths.

ACTIONS

- Target architectures, transition states and portfolio prioritization, with TOGAF governance and the EA4US repository
- Decoupling of critical monoliths into microservices and API-led connectivity
- API gateway/management (MuleSoft and Amazon API Gateway) and event-driven architecture (Kafka/RabbitMQ)

- Hybrid and multicloud environments (AWS, Azure, Google Cloud and Oracle Cloud)

KEY DECISIONS

- Strangler Fig with an anti-corruption layer
- API-first, with versioned contracts
- Prioritization by value, risk and obsolescence

RESULTS

- Incremental transition of the legacy portfolio to microservices, APIs and events under architecture governance
- −35% change lead time
- 80% of APIs exposed and governed through the gateway

STACK

Languages TypeScript 6, SQL; React 19, Node.js 22/24 LTS

Platforms MuleSoft (Anypoint Platform), Amazon API Gateway, Apache Kafka 3.x, RabbitMQ 3.x, AWS, Azure, Google Cloud, Oracle Cloud (OCI)

Standards OpenAPI 3.1, AsyncAPI, OAuth 2.0, EDA

Practices Strangler Fig, CI/CD, observability

Ecosystem MuleSoft, Oracle, Microsoft, AWS, Google

P08 Enterprise Integration Platform — MuleSoft and Amazon API Gateway

YDUQS · 2021 – 2026 · Platforms & Integration

Role Integration architecture lead — API-led model, standards and API governance

Scale 1K+ APIs published · integrations across SIA, SAP, Salesforce, Oracle BRM, Payment Broker, Databricks and portals · millions of calls per day

Challenge Point-to-point integrations between academic, financial and relationship systems, with no standards, governance or visibility, slowing modernization and the onboarding of new systems.

ACTIONS

- API-led integration model (system, process and experience APIs) with MuleSoft (Anypoint Platform) and Amazon API Gateway
- Corporate API standards: OpenAPI 3.1, versioning, security (OAuth 2.0/OIDC), rate limits and observability
- Event-driven integration with Apache Kafka to propagate changes across domains
- API lifecycle governance: catalog, design review, publication and deprecation
- Integrations for the strategic programs: SIA, Oracle BRM, Payment Broker, Salesforce, SAP and Gibraltar

KEY DECISIONS

- MuleSoft for enterprise and process integrations; Amazon API Gateway for cloud-native, high-scale APIs
- Versioned contracts and API-first as a prerequisite for new systems
- Events (Kafka) to decouple domains instead of chained synchronous calls

RESULTS

- Standardized integration layer (Octopus) for the group's strategic programs
- −40% delivery time for new integrations through API reuse
- 1K+ APIs published and governed

STACK

Languages JavaScript, DataWeave, SQL; Node.js

Platforms MuleSoft (Anypoint Platform), Amazon API Gateway, Apache Kafka 3.x, AWS Lambda

Standards OpenAPI 3.1, AsyncAPI, REST, OAuth 2.0/OIDC, API-LED

Practices API-first, API governance, DevSecOps

Ecosystem Salesforce, MuleSoft, SAP, Oracle, AWS, Databricks

P09 AI and Operations Research Class Allocation — SIA × UniSoma Integration

YDUQS · 2023 – 2025 · Data & AI

Role Architecture lead for the SIA × UniSoma integration — from pipeline design to end-to-end automation

Scale 300K+ on-campus students · 90+ campuses · freshmen and returning students every semester · thousands of classes per cycle

Challenge On-campus academic planning, previously done in spreadsheets and sequentially, moved to UniSoma's educational intelligence solution, but feeding the model and returning results to the academic system were manual.

ACTIONS

- Integration architecture between the student information system (SIA) and the UniSoma solution, which uses AI and operations research for sequencing, class allocation, timetabling and room assignment
- Automation of the entire data flow, previously manual: extraction, transformation and import pipeline orchestrated with AWS Step Functions (transcripts, curricula, demand, offerings, rooms and faculty)
- Data quality validation and reconciliation every cycle, with automatic reprocessing and an audit trail
- Results (classes, offerings and allocations) returned to SIA for enrollment and re-enrollment of new and returning students
- Processing windows aligned with the academic calendar, with execution observability

KEY DECISIONS

- Serverless orchestration (Step Functions) with idempotent, reprocessable steps
- Versioned data contract between SIA and UniSoma, decoupling the optimization model from the academic system
- Batch processing per academic cycle, with validation before each import

RESULTS

- Previously manual data flow between SIA and UniSoma automated and auditable
- Contribution to the academic planning program that cut the cycle from over three months to about one month per semester, with personalized offerings per student
- 100% of cycles processed within the academic calendar window
- −90% manual effort to prepare and load data

STACK

Languages Python, SQL, JSON (Amazon States Language)

Platforms AWS Step Functions, AWS Lambda, Amazon S3, AWS Glue, Amazon CloudWatch, SIA (APIs), UniSoma (educational intelligence)

Standards REST, SFTP, versioned data contracts

Practices ETL/ELT, serverless orchestration, data quality, operations research, applied AI

Ecosystem UniSoma (AI and operations research optimization model), AWS

P10 Payment Broker

YDUQS · 2023 – 2026 · Platforms & Integration

Role Broker architecture lead — from design to implementation, with security and PCI compliance

Scale Payment methods: card, bank slip (boleto), Pix, loyalty points and student financing · 3 active gateways · BRL 3B+ processed per year · 99.95% availability

Challenge Redundant direct integrations between academic systems and acquirers, with poor traceability, limited conversion and high maintenance cost.

ACTIONS

- Removed redundant direct integrations with a unified payments layer, traceability and reconciliation
- Edge processing with Akamai EdgeWorkers and delivery through the Akamai CDN, so sensitive payment data never transits the group's infrastructure
- Third-party credit card tokenization vault: the group works only with tokens and stores no card data
- Multiple gateways with smart routing (cost, approval rate, availability and customer preference)
- Cloud-native, API-first and mobile-first product, with brand UI/UX and look-and-feel libraries through a design system
- Capture interface decoupled from other systems through inversion of control and the Facade pattern
- Evolution to recurring payments and Pix Automático, with readiness for Pix Parcelado (installments)
- Financial processing and reconciliation layer

KEY DECISIONS

- Gateway-agnostic: single contract (Facade) with adapters per provider
- Idempotency and reprocessing for payment events (webhooks)
- Sensitive data handled at the edge (Akamai) and tokenized in a third-party vault, reducing PCI DSS scope

RESULTS

- Higher conversion, lower default, lower maintenance cost and greater resilience and auditability
- Reduced PCI DSS scope: card data neither transits nor is stored in the group's infrastructure
- +9 p.p. approval rate through gateway routing
- −25% integration maintenance cost

STACK

Languages JavaScript, SQL; React 19, Node.js 22 LTS

Platforms Akamai EdgeWorkers, Akamai CDN, Azure (App Service, API Management, Service Bus, Functions), PostgreSQL 15+, third-party tokenization vault

Standards REST, OpenAPI 3.1, webhooks, OAuth 2.0, mTLS, PCI DSS 4.0, 3-D Secure 2.x, Pix, Pix Automático (Central Bank of Brazil)

Practices Facade/Adapter, idempotency, anti-fraud, observability

Ecosystem Bemobi, Altar, Santander, Getnet, Rede, Itaú, Central Bank of Brazil, Microsoft, Akamai

P11 Distance-Learning Hub Portal — Digital Channel for the Hub Network

YDUQS · 2020 – 2026 · Digital Products

Role Architecture lead for the Hub Portal — from process digitization to AI-driven evolution

Scale Growing network of distance-learning hubs · digital processes: documents, revenue transfers and monitoring

Challenge Hub operations relied on manual, decentralized processes, with a risk of inconsistency and a high level of regulatory requirements.

ACTIONS

- Single self-service portal for hub operations and relationship management
- Integration with the academic and relationship ecosystem, aligned with the other portals and apps
- Digitization and standardization of hub processes and data
- AI-first evolution (spec-driven development) in partnership with CI&T
- AI embedded in product design, architecture, development and evolution

KEY DECISIONS

- Self-service by default, reducing manual intervention by operations
- Single source of hub data, consumed by other systems
- Specification as the central artifact of AI-assisted development

RESULTS

- 100% growth in hubs operated through the portal (from 1K+ to 2K+)
- AI phase: development productivity above 5x
- −50% cycle time for hub processes

STACK

Languages JavaScript; React 19, Node.js 22 LTS

Platforms AWS

Standards REST, OpenAPI 3.1, OAuth 2.0/OIDC

Practices AI-first SDLC, spec-driven development, BCP (Business Complexity Points) productivity metric

Ecosystem CI&T, AWS

P12 Building and Managing the Architecture Team

YDUQS · 2020 – 2026 · Leadership & People

Role Direct manager of the architecture team — structure, career, development and retention

Scale 12 senior architect positions (enterprise, domain and solution), held by several professionals over the period · interface with managers, directors, VPs and squads

Challenge Building and keeping a senior, multidisciplinary and stable architecture team in a group growing organically and through M&A, with high demand for strategic projects and a competitive talent market.

ACTIONS

- Designed the team structure in three disciplines (enterprise, domain and solution), with roles, responsibilities and allocation by business domain
- Talent attraction and selection for the 12 positions, with technical and behavioral profiles defined by discipline
- Competency matrix, dual career path (technical and management tracks), individual development plans and performance review cycles
- Ongoing mentoring and team rituals: community of practice, peer review and decision records (ADR)
- High-performance culture, autonomy and technical accountability, with goals tied to the architecture portfolio

KEY DECISIONS

- Organization by discipline and business domain, with reference architects per area
- Dual career path to retain specialists without pushing them into management
- Succession and knowledge redundancy per domain, reducing dependence on key people

RESULTS

- 12-position team built and sustained as the technical reference for squads, leadership and the C-suite
- Continuity of architecture delivery despite natural team turnover, supported by a competency matrix, succession and documentation
- Architects developed on both the technical and management tracks

STACK

Platforms ServiceNow and Azure DevOps (work management), Microsoft 365 (collaboration)

Standards Competency matrix, dual career path, individual development plan, ADR, OKR

Practices Mentoring, performance reviews, community of practice, talent management, talent exchange, cross-pollination, learning journeys, insourcing, retention

Ecosystem ServiceNow, Microsoft

P13 IT Master Plan 2026–2030

YDUQS · 2025 – 2026 · Strategy & Architecture

Role Coordinator of the IT Master Plan — technology, AI, data and digital product strategy for 2026–2030

Scale 2026–2030 horizon · 40+ business capabilities assessed · 120+ initiatives prioritized · multi-year budget by domain

Challenge Turning the group's strategy through 2030 into a business-driven technology plan — AI innovation, data as a strategic asset, digital products and reduced obsolescence — with a prioritized portfolio and a shared view across business, architecture and IT.

ACTIONS

- Mapped solutions to business capabilities (heat maps) and assessed the current ecosystem, with an obsolescence index per application
- Generative and Agentic AI innovation agenda: use cases prioritized by value, AI governance and enabling platforms
- Strategic data vision: data as a product, analytics platform (Gibraltar), governance and quality as the foundation for AI
- Digital product portfolio (SIA, SAVA, portals, apps and channels) with an evolution roadmap and a product team model
- New technology radar and a plan to reduce obsolescence and overlaps, with greater use of strategic platforms
- Multi-year budget, architecture principles and guidelines, and prioritization by value, risk, effort and dependencies
- Governance model, team structure, training plan and tracking KPIs, with business continuity as a cross-cutting requirement

KEY DECISIONS

- Technology as a business lever: each initiative tied to a capability and an expected outcome
- Multi-criteria prioritization (value, risk, effort and dependencies), with an annual review integrated into the budget (rolling wave)
- AI and data as cross-cutting capabilities, with governance before scale

RESULTS

- 2026–2030 plan established as the basis for technology investment decisions
- 100% of strategic initiatives mapped to business capabilities
- AI, data and digital product roadmap integrated into the investment portfolio
- –30% obsolete or overlapping applications planned by 2030

STACK

Platforms ServiceNow (SPM), Power BI, Excel (portfolio and budget)

Standards TOGAF 9.2, COBIT 2019, business capabilities, Three Horizons of Innovation, Technology Radar, ISO/IEC 42001 (AI governance)

Practices Capability-based planning, rolling wave planning, portfolio management, application rationalization (TIME), digital product management, data and AI strategy, DevSecOps

Ecosystem ServiceNow, Microsoft

P15 SAVA — Proprietary Virtual Classroom (LMS)

YDUQS · 2020 – 2024 · Digital Products

Role SAVA architecture lead — reference architecture guiding the CI&T development team

Scale 1.3M+ students in the group (2024) · 800K+ undergraduate students on the platform · web and mobile app

Challenge An outsourced platform that was unstable under concurrent access, a fragmented journey and manual configuration through spreadsheets.

ACTIONS

- Modern, resilient, high-availability architecture for concurrent usage peaks
- Integration with SIA, Joana (EnsineMe content repository), employability solutions, other LMSs and analytics platforms (Gibraltar and Google)
- Fully digital back office for configuration and operation by the institutions
- Mobile app for students, with a journey integrated with the web platform (mobile-first) and with studies and assessments connected
- Accessibility and compliance with Ministry of Education regulations

KEY DECISIONS

- Build our own LMS instead of keeping the outsourced platform, to control experience and peaks
- Mobile-first as the experience guideline
- Configurable back office to reduce dependence on IT

RESULTS

- Stable solution with automatic scaling at peaks, up to 750K active students in a month
- App rated 4.7 in the stores and accounting for 40% of platform access
- "Continue where you left off": from 5 minutes to 3 seconds to find content (41% of accesses)
- Configuration changes from up to 4 hours (manual spreadsheets) to about 1 minute in the back office
- Integrated study and assessment journey doubled spontaneous use of practice tests
- 99.9% availability at peaks

STACK

Languages TypeScript; React 17/18, React Native (app), Node.js 16/18/20 LTS

Platforms MongoDB Atlas, AWS (CDN, autoscaling), Google Analytics, Gibraltar

Standards REST, GraphQL, OAuth 2.0/OIDC (SSO), WCAG 2.1 AA, LTI 1.3, xAPI

Practices Interoperability, mobile-first, observability, load and stress testing

Ecosystem CI&T (development), Google, MongoDB, AWS

P16 SAP ERP — Customization, Tax Compliance and S/4HANA Migration

YDUQS · 2025 – 2026 · Platforms & Integration

Role ERP architecture lead — customizations, tax compliance and S/4HANA migration planning

Scale ECC → S/4HANA migration · FI/CO, MM and SD modules · 300+ custom (Z) objects assessed · multi-year migration waves

Challenge End of standard ECC maintenance (2027) and the Brazilian tax reform (CBS in 2027; IBS from 2029 to 2033, with parallel tax regimes) required a strategic migration, reduced technical debt and an architecture aligned with the ecosystem.

ACTIONS

- Defined the ECC → S/4HANA migration strategy and architecture, including scope, waves and sequencing
- Governance and assessment of custom (Z) objects: business impact, technical complexity and remediation feasibility
- Clean Core strategy: side-by-side extensibility (SAP BTP) favored over core modifications
- Integration architecture: Synchro (tax), Oracle BRM (billing) and the ecosystem
- Tax reform readiness: mapping of critical processes, parallel tax regimes (CBS/IBS) and the alphanumeric CNPJ
- Cutover criteria, test plan and contingency plan

KEY DECISIONS

- Side-by-side extensibility and Clean Core as architecture principles
- Decoupled tax engine (Synchro) integrated through APIs, reducing technical debt in the core
- Phased migration in waves, front-loading critical tax requirements
- Customization governance with an architecture committee and technical acceptance criteria

RESULTS

- Migration architecture defined and approved, aligned with tax and business requirements
- −40% impact on the core after architectural remediation
- 70% of critical tax processes mapped to CBS/IBS and a compliance roadmap defined

STACK

Languages ABAP, SQL

Platforms SAP ECC 6.0 → SAP S/4HANA (target release 2027), SAP Fiori, SAP BTP, Synchro, Oracle BRM 15

Standards OData v4, BAPI, IDoc → REST APIs, Clean Core, CBS/IBS, alphanumeric CNPJ

Practices Migration architecture, customization management, cutover planning

Ecosystem SAP, Synchro, Oracle

P17 Salesforce Implementation

YDUQS · 2020 – 2025 · Platforms & Integration

Role Salesforce architecture lead — from RFP to setting up the CoE, with multiple integrators

Scale Sales, Service, CPQ and Marketing Cloud · 5M+ active records · multiple integrators in parallel · 10+ brands

Challenge Unifying acquisition, service, pricing and communication in a single CRM while coordinating multiple integrators.

ACTIONS

- RFP, vendor assessment, solution architecture and integrations
- Education data modeling in Salesforce
- Integration standards with SIA, SAP and education platforms
- Channel integration: AI agents, voice, WhatsApp, email and chat
- Integrator management and creation of a CoE (Center of Excellence) for governed evolution

KEY DECISIONS

- Education data model (lead → applicant → student) aligned with SIA
- Integration through APIs and events (Platform Events) instead of point-to-point
- CoE for release, quality and standards governance

RESULTS

- Unified CRM for acquisition, service, pricing and communication, with evolution governed by a CoE
- −30% lead response time
- +18% lead-to-enrollment conversion

STACK

Languages Apex, JavaScript, SOQL, SOSL; Lightning Web Components, Flow

Platforms Sales Cloud, Service Cloud (Unlimited Edition), Industries CPQ (Vlocity), Marketing Cloud, Salesforce APIs (REST, Bulk, Platform Events)

Standards REST, SOAP, Platform Events, OAuth 2.0

Practices CI/CD (Salesforce DX), CoE, integrator management

Ecosystem Salesforce and integrators, SAP, Meta (WhatsApp)

P18 Multicloud Strategy — Architecture, Workload Migration and Continuity

YDUQS · 2021 – 2026 · Cloud, Security & Ops

Role Owner of the multicloud reference architecture — workload placement, DR and costs

Scale AWS, Azure, Oracle Cloud (OCI) and Google Cloud · 200+ workloads · RTO/RPO by criticality tier

Challenge Workloads spread across four providers, requiring placement criteria, high availability, DR, compliance and cost governance.

ACTIONS

- Reference architecture and workload placement criteria by platform
- Practices to neutralize vendor lock-in and apply inversion of control
- Standardized Infrastructure as Code (IaC) delivery pipelines with Terraform
- Workload migration to the cloud
- High availability, disaster recovery and compliance requirements
- Cloud cost governance (FinOps)

KEY DECISIONS

- Placement by workload fit to the provider (data, integration, licensing and latency)
- Standardized landing zones and IaC
- DR strategy by criticality tier

RESULTS

- Critical workloads meeting high availability, DR and compliance in a multicloud environment, with cost governance
- −20% cloud cost after FinOps actions
- RTO ≤ 4h and RPO ≤ 1h for the critical tier

STACK

Languages HCL (Terraform), Bicep, Python (automation), YAML

Platforms AWS, Azure, Oracle Cloud (OCI), Google Cloud, Terraform 1.x

Standards CIS Benchmarks, ISO/IEC 27001:2022, FinOps Framework

Practices IaC, FinOps, DR, Zero Trust

Ecosystem Oracle, Microsoft, AWS, Google

P19 Unified Observability with Elastic — Tool Consolidation

YDUQS · 2021 – 2023 · Cloud, Security & Ops

Role Observability platform architecture lead — tool consolidation and retirement

Scale Logs, metrics, traces (APM) and uptime · 2K+ hosts and containers · 200+ instrumented applications

Challenge Observability fragmented across several tools (Splunk, AppDynamics, Zabbix and others), with high licensing costs, a partial view of incidents and manual correlation of logs, metrics and traces.

ACTIONS

- Unified observability reference architecture on the Elastic Stack: logs, metrics, APM, uptime/synthetics and RUM
- Standardized collection with Elastic Agent, Fleet and Beats; ingestion with Logstash and ingest pipelines
- Instrumentation with Elastic APM and progressive adoption of OpenTelemetry
- Migration and retirement of previous tools, with wave-based coexistence
- ILM (hot, warm, cold and frozen) by criticality; Kibana dashboards, alerts and SLOs integrated with ServiceNow

KEY DECISIONS

- A single observability platform instead of tools per domain
- Open standards (OpenTelemetry and ECS) to reduce lock-in
- Retention by criticality tier to balance cost and history
- Separation of concerns: observability on Elastic and security (SIEM) on Microsoft Sentinel

RESULTS

- Observability consolidated on Elastic, retiring Splunk, AppDynamics, Zabbix and others
- −40% observability licensing cost
- −50% incident MTTR
- 100% of critical systems with centralized logs, metrics and alerts

STACK

Languages KQL, Query DSL (JSON), Painless; YAML (Elastic Agent and Beats)

Platforms Elastic Stack 7.x → 8.x (Elasticsearch, Logstash, Kibana), Elastic Agent/Fleet, Beats, Elastic APM, ServiceNow

Standards OpenTelemetry, ECS (Elastic Common Schema), SLI/SLO, ILM

Practices Observability, SRE (SLOs and error budgets), incident management, FinOps

Ecosystem Elastic, Microsoft, ServiceNow · replaced: Splunk, AppDynamics, Zabbix

P20 New Billing Platform with Oracle BRM

YDUQS · 2023 – 2026 · Platforms & Integration

Role Lead for Billing selection and architecture — from choosing Oracle BRM to the rollout plan

Scale Student financial lifecycle · 2M+ invoices/month · 5 to 6 brands in phases · integrations with SIA, SAP FI/CO, Salesforce CPQ, Payment Broker, Recupera and Synchro

Challenge Fragmented in-house solutions (such as SIA) for contracts, invoicing, delinquency and renegotiation, with no single platform for the financial lifecycle.

ACTIONS

- Technical and commercial selection (functional and non-functional criteria, TCO and tax fit)
- Distributed-system solution architecture defining responsibilities, data domains, integrations, choreography, state machine and coexistence
- Integration architecture Oracle BRM ↔ SAP FI/CO ↔ Payment Broker ↔ Salesforce, with SIA, Salesforce CPQ, SAP ERP, Recupera and Synchro
- Modeling of academic and financial data and the product and price catalog
- Rollout plan by brand, with temporary coexistence
- Tax reform compliance and readiness for recurring payments through Pix Automático

KEY DECISIONS

- Billing as the single source of invoicing; SAP as the accounting ledger
- Event-driven integration for payment settlement and reconciliation
- Decoupled tax engine (Synchro) to absorb tax changes without touching the core

RESULTS

- Centralized billing and collections platform, already absorbing the tax reform guidelines
- −30% billing cycle closing time
- −15% projected delinquency with a unified collections workflow

STACK

Languages Java, C/C++ (BRM extensions), PL/SQL, SQL

Platforms Oracle BRM 15, Oracle Database 19c, SAP ECC (FI/CO), Salesforce CPQ, Synchro

Standards REST, SOAP, events (Apache Kafka), PCI DSS 4.0, CBS/IBS, Pix Automático

Practices Event-driven integration, automated reconciliation, tax regression testing

Ecosystem Oracle, SAP, Salesforce, Recupera, Synchro

P21 Brazilian Tax Reform Readiness Program (CBS/IBS)

YDUQS · 2025 – 2026 · Strategy & Architecture

Role Program architecture lead — impacts, parallel tax regimes and readiness plan

Scale Billing (Oracle BRM), SAP ERP, Synchro and sales channels · all group brands · transition from 2026 to 2033

Challenge The tax reform replaces PIS, Cofins, ICMS and ISS with CBS and IBS between 2026 and 2033, with both models running in parallel, affecting invoicing, contracts, prices and tax compliance for a group with millions of charges.

ACTIONS

- Impact mapping by business capability and system (billing, ERP, tax, CRM and pricing)
- Architecture for parallel tax regimes: calculation, assessment and tax documents in the current and new models
- Integration of Oracle BRM and SAP with Synchro as the tax engine
- Phased readiness plan aligned with the legal timeline (tests in 2026, CBS in 2027 and IBS from 2029 to 2033)
- Preparation for the alphanumeric CNPJ and the new tax document layouts

KEY DECISIONS

- Decoupled tax engine (Synchro) as the single source of tax rules
- Readiness by phase and by brand, with parallel testing before each cutover
- Tax changes isolated in the tax engine, with no changes to the billing core

RESULTS

- Architecture ready for the 2026–2033 parallel tax regimes
- 100% of critical tax flows mapped with a readiness plan
- Rate and rule changes concentrated in the tax engine, with no rework in the billing core

STACK

Languages SQL, ABAP

Platforms Synchro, Oracle BRM 15, SAP ECC → S/4HANA, Salesforce CPQ

Standards CBS/IBS, NF-e, NFS-e, alphanumeric CNPJ, REST

Practices Regulatory change management, parallel testing, tax governance

Ecosystem Salesforce, SAP, Oracle, Synchro

P22 Enterprise Architecture Repository and LeanIX POC

YDUQS · 2021 – 2026 · Strategy & Architecture

Role Owner of the architecture repository and the LeanIX evaluation — from inventory to POC and business case

Scale 600+ applications · 1K+ integrations and APIs · 3 control sources (EA4US, ServiceNow and Azure DevOps)

Challenge Manual architecture controls spread across EA4US, ServiceNow and DevOps, with no single view of the portfolio, dependencies, technologies and application lifecycle.

ACTIONS

- Mapped applications, capabilities, integration diagrams and an initial API inventory, with technology obsolescence analysis
- Metamodel (application, capability, technology, integration and lifecycle) aligned with TOGAF and ArchiMate
- LeanIX POC: modeling, data loading via API and spreadsheets, portfolio dashboards and reports (TIME model)
- Business case for budget approval and a wave-based rollout plan

KEY DECISIONS

- Single source of truth per data type: CMDB for infrastructure; EA repository for applications and capabilities
- ServiceNow ↔ LeanIX integration via API instead of double entry

RESULTS

- POC completed successfully; rollout pending budget approval
- −80% estimated manual effort to maintain the business application inventory and portfolio reports
- 90% of business applications with owner, criticality and lifecycle defined in the POC

STACK

Languages ArchiMate 3.2, SQL (data loads and ETL)

Platforms EA4US, SAP LeanIX (POC), ServiceNow (APM, CMDB), Azure DevOps

Standards TOGAF 9.2, ServiceNow CSDM, TIME model, REST, JSON

Practices Application portfolio management, obsolescence management, IT configuration and asset management, IT architecture

Ecosystem ServiceNow, SAP LeanIX, Microsoft

P23 ServiceNow Implementation

YDUQS · 2022 – 2024 · Platforms & Integration

Role ServiceNow architecture lead — scope, CMDB/CSDM and multi-brand consolidation

Scale Business apps (shared services center, HR, academic) · ITSM, SPM, CMDB and APM · multiple brands · 10K+ end users · CMDB with 50K+ configuration items

Challenge Service management fragmented across brands, with no CMDB as a single source and no unified view of the application and project portfolio.

ACTIONS

- Scope with business apps and ITSM (incidents, problems, changes and requests)
- CMDB as the single source of truth for the IT inventory, with CSDM
- SPM (project portfolio) and APM (application lifecycle)

KEY DECISIONS

- CSDM as the CMDB data model
- Automated integrations and loads to populate the CMDB
- A single platform for IT and business (shared services, HR and academic)

RESULTS

- Business and IT service management for multiple brands consolidated on a single operational governance platform
- −30% resolution time
- 90% of critical business application configuration items with a defined owner

STACK

Languages JavaScript (Glide API); Flow Designer, IntegrationHub

Platforms ServiceNow, Tokyo → Xanadu families (ITSM, SPM, CMDB, APM)

Standards CSDM, ITIL 4, REST, SOAP

Practices CMDB health, release governance

Ecosystem ServiceNow

P25 Proprietary Academic Products Architecture

YDUQS · 2022 – 2026 · Digital Products

Role Architecture lead for the in-house product portfolio — shared standards and make-or-buy decisions

Scale SIA, SAVA, SIRIUS, Joana, portals and apps · 1.3M+ students

Challenge Reducing dependence on external vendors in the core business with scalable in-house products integrated with the ecosystem.

ACTIONS

- Scalable software architectures for the in-house academic products
- Portfolio view and product and architecture roadmap
- Integration with SAP, Salesforce, ServiceNow and Databricks
- Shared standards: APIs, identity and observability

KEY DECISIONS

- Common platform for identity, observability and APIs across all products
- Make-or-buy by domain

RESULTS

- In-house products that reduce dependence on external vendors and create a sustainable competitive edge
- −25% third-party licensing costs
- 5+ in-house products running on shared standards

STACK

Languages TypeScript 6, Python, SQL; React 19, Node.js 22/24 LTS

Platforms Oracle Database 19c, Oracle Autonomous Database, MongoDB Atlas, AWS, Apache Kafka 3.x, SAP, Salesforce, ServiceNow, Databricks

Standards OpenAPI 3.1, OAuth 2.0/OIDC, OpenTelemetry

Practices Domain-Driven Design, observability, ADR

Ecosystem Salesforce, ServiceNow, SAP, Oracle, AWS, Databricks, MongoDB

P26 SIRIUS — Academic Assessment System

YDUQS · 2024 – 2025 · Digital Products

Role SIRIUS architecture lead — high availability, anti-fraud and integration with SIA and SAVA

Scale 1.3M+ students · millions of answers per assessment cycle

Challenge Running exams, practice tests and assessments at scale with integrity (anti-fraud), concurrent peaks and regulatory compliance, independently of the LMS.

ACTIONS

- High-availability architecture for peaks (queues, cache and elastic scaling)
- Anti-fraud mechanisms: identity, behavior and proctoring
- Integration with SIA (grades and calendar) and SAVA (study-assessment flow)
- Compliance with Ministry of Education regulations and the new distance-learning regulatory framework

KEY DECISIONS

- In-house system decoupled from SAVA, evolving independently
- Elastic scaling and graceful degradation at peaks
- Auditable evidence record for each exam

RESULTS

- Large-scale assessment on an in-house platform, evolving independently from the virtual learning environment
- 100K+ concurrent assessments validated in load testing
- −70% fraud incidents
- 99.9% availability on exam days

STACK

Languages TypeScript 5.x, Python (anti-fraud), SQL; React 19, Node.js 22 LTS

Platforms AWS (Auto Scaling, queues, CDN), Redis 7.x, PostgreSQL 15+

Standards WebSocket, SSE, OAuth 2.0/OIDC, LGPD, WCAG 2.2 AA

Practices Load testing, resilience, observability, proctoring

Ecosystem AWS

P27 Enterprise SIEM with Microsoft Sentinel

YDUQS · 2021 – 2026 · Cloud, Security & Ops

Role Lead of the architecture team for the SIEM — reference architecture, collection and integration

Scale Cloud SIEM (Azure) · identity, cloud, endpoint, network and application sources · multiple brands and a multicloud environment

Challenge Security incident detection and response relied on isolated tools, with no centralized event correlation in a multicloud, multi-brand environment.

ACTIONS

- SIEM reference architecture on Microsoft Sentinel over Log Analytics, with connectors for identity (Microsoft Entra ID), Microsoft 365, clouds (Azure and AWS), network and applications
- Collection and retention guidelines by criticality and ingestion cost governance
- Detection rules, workbooks and automated response playbooks (SOAR) with Logic Apps
- Security incidents integrated with ServiceNow, and separation of concerns with observability on Elastic

KEY DECISIONS

- Separation of concerns: security on Sentinel, observability on Elastic

- Cloud-native SIEM integrated with the Microsoft ecosystem already used by the group
- Retention by criticality tier to balance cost and investigation needs

RESULTS

- Security incident detection and response centralized in an enterprise SIEM
- Security events correlated centrally on a single platform
- Recurring responses automated through playbooks

STACK

Languages KQL

Platforms Microsoft Sentinel, Azure Log Analytics, Microsoft Entra ID, Microsoft 365, Logic Apps, ServiceNow

Standards MITRE ATT&CK, Syslog, CEF, ISO/IEC 27001:2022, LGPD

Practices SOC, SOAR, threat hunting, security incident management

Ecosystem Microsoft, ServiceNow, AWS, Elastic

P28 Joana — EnsineMe Academic Content Repository

YDUQS · 2020 – 2024 · Digital Products

Role Joana architecture lead — repository, metadata, VideoLib integration and content delivery

Scale Content from every group brand (videos, texts, PDFs, assessments and interactive packages), highly modular · consumed by SAVA, apps and other LMSs · millions of content objects

Challenge Academic content scattered by brand, platform and vendor, with no versioning, standardized metadata or reuse, limiting modular production at EnsineMe, the group's content edtech.

ACTIONS

- Architecture of Joana, EnsineMe's content repository, built as an in-house product alongside SAVA
- Metadata model, taxonomy and versioning of modular learning objects, reusable across courses, brands and delivery modes and in building new products
- Publishing and consumption APIs for SAVA, apps and other LMSs, with access and copyright control
- Document and media ingestion and processing pipeline, with delivery over CDN
- Integration with VideoLib (eCine) for video management and streaming, live broadcasts (real-time classes), transcription, search and indexing with Microsoft AI, and per-class access analytics
- EnsineMe Studio, an eCine app for the production team to access and share published videos
- Integration with the content production workflow and consumption analytics (Gibraltar)

KEY DECISIONS

- Repository decoupled from the LMS as the single source of content for all channels
- Video handled by a specialized platform (VideoLib), integrated with the repository through APIs, instead of in-house streaming
- Content as a product, with metadata and versioning from the source
- Open e-learning standards for interoperability

RESULTS

- Single source of EnsineMe academic content for SAVA, apps and other channels
- Videos automatically transcribed and indexed, making content searchable
- Visibility of access quality, origin and time per class, supporting student progress tracking
- +40% reuse of content objects across courses and brands, reducing production rework
- Foundation for moving content delivery to Amazon CloudFront (2022 – 2025)

STACK

Languages JavaScript, Python (media processing), SQL; Node.js

Platforms Amazon S3, Amazon CloudFront, MongoDB Atlas, AWS Elemental MediaConvert, VideoLib (eCine, on Azure), Microsoft AI (transcription and indexing), Gibraltar (analytics)

Standards SCORM 1.2/2004, xAPI, LTI 1.3, IEEE LOM (metadata), REST, OAuth 2.0/OIDC

Practices Content as a product, versioning, metadata governance

Ecosystem EnsineMe (YDUQS content edtech), eCine (VideoLib), Microsoft, AWS, MongoDB

P30 Employability Platform — From Student to Job Market

YDUQS · 2025 – 2026 · Digital Products

Role Platform architecture lead — integration with SAVA, job partners and AI matching

Scale All students in the group · 10K+ active job openings · hundreds of partner companies

Challenge Connecting the academic journey to career opportunities, integrated with the student's ecosystem (SAVA).

ACTIONS

- Platform integrated with the virtual learning environment (SAVA)
- Integration with job and internship partners through standardized APIs and feeds
- Inclusion features (people with disabilities and neurodivergent students)
- AI job matching and funnel analytics

KEY DECISIONS

- Partner aggregation through standardized integration contracts
- Explainable matching
- Employability data in Gibraltar

RESULTS

- More than 30% growth in career opportunities for students
- +20% applications per active student
- +15% internship placement rate

STACK

Languages Python (matching), TypeScript

Platforms Elasticsearch 8.x, AWS, Gibraltar

Standards REST, OAuth 2.0, LGPD, WCAG 2.2 AA

Practices AI matching, A/B testing, analytics

Ecosystem CI&T, MongoDB, AWS, Elastic

P31 HR/HCM Systems Architecture Assessment — People & Management

YDUQS · 2021 – 2023 · Strategy & Architecture

Role Technical lead of the assessment — from AS-IS to the roadmap presented to People & Management leadership

Scale HR and payroll domains · 4 layers (core HCM, employee engagement, talent intelligence and data hub) · 10+ capabilities assessed · 20+ systems inventoried

Challenge A fragmented HR ecosystem with specialist solutions and manual processes, and the need for an investment decision based on capabilities and maturity.

ACTIONS

- Layered AS-IS and TO-BE architecture, with an inventory and functional and technical fit/gap of the solutions in use
- Maturity assessment by capability, with a traffic-light view of execution and operation
- Market benchmark (Workday, SAP SuccessFactors, Oracle HCM Cloud, ServiceNow HRSD, Senior HCM, ADP, Lugar de Gente and Gupy)
- Evolution roadmap and executive presentation to People & Management leadership
- Prioritization and planning of the solution architecture evolution, reducing overlaps by potentially replacing niche solutions with natively integrated, integrable platforms

KEY DECISIONS

- Assessment by business capabilities, not by systems
- Benchmark as the reference yardstick, with no vendor bias

RESULTS

- AS-IS/TO-BE view and roadmap presented to People & Management leadership as the basis for the investment decision
- 70% of capabilities with a relevant functional or technical gap
- 3 target architecture alternatives with compared TCO

STACK

Languages ArchiMate 3.2, BPMN 2.0

Platforms Benchmark: Workday, SAP SuccessFactors, Oracle HCM Cloud, ServiceNow HRSD, Senior HCM, ADP, Lugar de Gente, Gupy; Excel, Power BI (assessment matrix); ServiceNow, Microsoft 365 (collaboration)

Standards Capability model, fit/gap, eSocial, LGPD

Practices Capability mapping, maturity assessment, business case, application rationalization (TIME)

Ecosystem Microsoft (assessment tools) · benchmarked: Workday, SAP SuccessFactors, Oracle HCM Cloud, ServiceNow HRSD, Senior HCM, ADP, Lugar de Gente, Gupy

P33 Digital Portals — DXP with Strapi (Headless CMS)

YDUQS · 2022 – 2025 · Digital Products

Role Portals architecture lead — DXP, experience layer and ecosystem integration

Scale Acquisition, documents, e-signature, student and faculty portals · 10+ main journeys · multiple group brands

Challenge Digital experiences fragmented by brand and process, requiring a single experience layer over SIA, SAVA, SIRIUS, Salesforce, Billing, Recupera and the Payment Broker, with a shared, governable content model.

ACTIONS

- DXP (Digital Experience Platform) architecture with Strapi as a headless CMS for centralized content and metadata management
- Unified digital experience layer over the academic ecosystem
- Electronic document signature integration
- Design system shared across brands, consumed through Strapi
- Single sign-on (SSO) with OAuth 2.0/OIDC across portals, apps and systems of record
- Backend for Frontend (BFF) per channel, decoupled from Strapi, with journey observability

KEY DECISIONS

- Strapi as the single source of truth (SSOT) for content, data structures and reusable components
- BFF per channel to isolate front ends (web, mobile, partners) from systems of record
- Design system and components managed through Strapi and consumed by React/React Native
- Single SSO with OAuth 2.0/OIDC for all journeys

RESULTS

- DXP architecture at scale, with Strapi orchestrating content and journey metadata
- Single digital channels for acquisition, documents and relationship with students and faculty
- +30% journeys completed without service intervention
- −40% average time to issue and sign documents
- Content and product team trained on Strapi, reducing dependence on development

STACK

Languages TypeScript; React 18/19, Next.js 13 → 15, Node.js 18 → 22 LTS

Platforms Strapi 4 → 5 (headless CMS), AWS, Amazon API Gateway, Salesforce, APIs (SIA, SAVA, SIRIUS)

Standards OAuth 2.0/OIDC, BFF, electronic signature (Law 14,063/2020), WCAG 2.1 AA

Practices Design system, decentralized content management, feature flags, A/B testing, observability

Ecosystem Salesforce, AWS, Recupera, Strapi

P34 Mobile Apps for Students and Faculty

YDUQS · 2022 – 2025 · Digital Products

Role Mobile apps architecture lead — mobile-first journeys, integration and security

Scale Native apps for students and faculty · multiple group brands · hundreds of thousands of active users

Challenge Academic and administrative journeys on mobile scattered across apps and brands, with no common standard for experience, security or integration with systems of record.

ACTIONS

- Architecture of native apps for students and faculty, with mobile-first journeys (academic, documents, finance and notifications)
- Integration with SIA, SAVA, SIRIUS, Billing and the Payment Broker through a BFF dedicated to the mobile channel
- Design system components and content managed in Strapi, shared with the portals
- Single sign-on (SSO) with OAuth 2.0/OIDC and push notifications
- Journey observability and usage analytics

KEY DECISIONS

- Mobile-only BFF isolating the apps from systems of record
- React Native to share code and components between iOS and Android
- Content and components served by Strapi, enabling changes without a new store release

RESULTS

- Single mobile experience for students and faculty, integrated with the academic ecosystem
- +25% monthly active users in the apps
- −35% service requests, resolved in the app itself

STACK

Languages TypeScript; React Native, Node.js 18 → 22 LTS

Platforms AWS, Amazon API Gateway, Strapi 4 → 5, APIs (SIA, SAVA, SIRIUS, Billing)

Standards OAuth 2.0/OIDC, BFF, WCAG 2.1 AA, OWASP MASVS

Practices Mobile-first, design system, observability, automated testing, continuous store releases

Ecosystem AWS, Strapi

P35 Digital Service Channels — Avaya and Talkdesk × Salesforce

YDUQS · 2024 – 2026 · Platforms & Integration

Role Service channels architecture lead — CCaaS × CRM integration and portability across operations

Scale Voice, chat, WhatsApp, email and AI agents · outsourced contact centers · 50K+ contacts per day

Challenge Fragmented omnichannel service dependent on contact center vendors, with little view of the student across channels.

ACTIONS

- Integration of the Avaya and Talkdesk contact center platforms with Salesforce Service Cloud
- Integration standards between channels, CRM and academic systems
- Architecture with portability across outsourced contact center operators
- Omnichannel routing and a foundation for AI agents

KEY DECISIONS

- CRM as the system of record; CCaaS pluggable through adapters (portability)
- Single student identification across channels
- Interaction data sent to Gibraltar for analytics

RESULTS

- Omnichannel service integrated with the CRM, with better contact center KPIs
- Secure tools natively integrated with the CRM; portability across operators
- −20% average handling time
- +10 p.p. first-contact resolution

STACK

Languages TypeScript 6, JavaScript, Apex

Platforms Salesforce Service Cloud, Talkdesk (CCaaS), Avaya, WhatsApp Business Platform

Standards SIP, WebRTC, CTI, REST, webhooks, OAuth 2.0, LGPD

Practices Omnichannel routing, workforce management, contact center analytics

Ecosystem Talkdesk, Avaya, Salesforce, Meta (WhatsApp)

P36 Renova — Re-enrollment Portal

YDUQS · 2021 – 2023 · Digital Products

Role Lead of the architecture team on Renova — architecture, integration and scalability of re-enrollment

Scale Semester re-enrollment of the group's undergraduate base

Challenge A complex, barely digital re-enrollment process, with a direct impact on student renewal and the group's recurring revenue.

ACTIONS

- Architecture of the re-enrollment portal (Renova), integrated with the student information system (SIA) and the student's digital channels
- Simplified re-enrollment journey, with a "wish list" step for choosing courses
- Architecture, integration and scalability guidelines for re-enrollment peaks
- Technical direction of the CI&T development team

KEY DECISIONS

- Self-service digital journey with no dependence on service agents
- Architecture prepared for seasonal access peaks during re-enrollment periods

RESULTS

- 10% higher renewal among students using the wish-list step
- Higher student satisfaction with the re-enrollment process

STACK

Languages JavaScript; React, Node.js

Platforms SIA (APIs), AWS

Standards REST, OAuth 2.0/OIDC

Practices Mobile-first, self-service, load testing for seasonal peaks

Ecosystem CI&T, AWS

Adtalem

P14 Adtalem → YDUQS M&A — Due Diligence and Systems Integration

Adtalem · 2019 – 2020 · Strategy & Architecture

Role Central role in the technical due diligence and the systems transition of the acquisition

Scale BRL 2.2 billion transaction (announced in Oct/2019 at BRL 1.92 billion) · 13 higher education institutions and test-prep businesses · 100K+ students

Challenge Transitioning Adtalem's Brazilian operation to YDUQS systems while ensuring the institutions' continuity during and after the acquisition.

ACTIONS

- Mapped redundancies, security risks and technical debt
- Platform consolidation plan (ERP, academic and CRM)
- Integration roadmap, supported by the discovery & assessment and the architecture reference model

KEY DECISIONS

- Operational continuity as the priority
- Consolidation by platform, in waves

RESULTS

- Integration roadmap that reduced the deal's technology risks and ensured post-acquisition continuity
- BRL 20M/year in IT synergies mapped
- −30% redundant platforms planned

STACK

Languages SQL

Platforms Adtalem legacy systems (ERP, academic, CRM); YDUQS platforms (target), Microsoft 365 (collaboration)

Standards ISO/IEC 27001:2013, LGPD

Practices Technical due diligence, Day-1 readiness, synergy tracking

Ecosystem Microsoft

P37 Creating the IT Architecture Area and the ARB

Adtalem · 2019 – 2020 · Strategy & Architecture

Role Creator and coordinator of the IT Architecture area — reference model and ARB

Scale Operation with 100K+ students · 13 higher education institutions and test-prep businesses · team of 3 to 5 architects · biweekly ARB

Challenge The Brazilian operation of an international group, being acquired by YDUQS, with no formal architecture area or governance over new projects and purchases.

ACTIONS

- Architecture reference model for solutions, integrations and data
- Processes, methodologies and tools for the new area, aligned with YDUQS group standards
- Architecture Review Board (ARB) for internal software projects and third-party SaaS purchases

KEY DECISIONS

- Lightweight ARB with objective approval criteria (security, integration, data and cost)
- Acquirer group standards as the baseline

RESULTS

- Architecture area established, with a reference model, processes and governance (ARB) aligned with the YDUQS group
- 100% of technology purchases reviewed by the ARB
- −25% redundant IT purchases

STACK

Platforms Confluence, SharePoint (repository), ARB checklist

Standards TOGAF 9.2, reference model, ADR

Practices Architecture governance, Lean IT

Ecosystem Microsoft

P40 Integration Architecture and Digital Culture

Adtalem · 2019 – 2020 · Platforms & Integration

Role Owner of the integration architecture and the adoption of Lean IT practices

Scale CRM, ERP and LMS · 100+ point-to-point integrations assessed

Challenge Point-to-point integrations between CRM, ERP, LMS and other systems, with a risk of inconsistency and low reuse.

ACTIONS

- Integration model using API-led connectivity, ESB, iPaaS, API gateway and API management (RESTful APIs)
- Transition to a centralized service layer
- Fostered a Lean IT culture: DevSecOps, Agile, CI/CD, IaC and cloud computing

KEY DECISIONS

- API-led (system, process and experience)
- Versioned API contracts

RESULTS

- Centralized service layer replacing point-to-point integrations, with more consistent data across systems
- −40% point-to-point integrations

STACK

Languages JavaScript, XML, JSON, YAML; Node.js

Platforms iPaaS, ESB, API Gateway, Jenkins, GitLab CI, Terraform

Standards REST, OpenAPI 3.0, OAuth 2.0, API-LED

Practices DevSecOps, CI/CD, IaC, Lean IT, Agile

P46 IT Ecosystem Discovery and Assessment

Adtalem · 2019 – 2020 · Strategy & Architecture

Role Led the discovery and assessment — inventory, maturity and evolution roadmap

Scale 13 higher education institutions and test-prep businesses · 150+ applications · 100+ integrations · 2K+ configuration items (business applications, integrations, instances and databases)

Challenge A full assessment of Adtalem Brazil's IT ecosystem was needed to support acquisition and integration decisions.

ACTIONS

- Survey of configuration items: applications, integrations, data and infrastructure
- Quality and maturity assessment, identifying gaps and action plans
- Technology evolution roadmap

KEY DECISIONS

- Objective maturity criteria
- Prioritization by risk and integration effort

RESULTS

- Evolution roadmap that guided modernization initiatives and reduced integration risks
- 25% of applications classified as high risk

STACK

Languages SQL (inventory consolidation), ArchiMate

Platforms CMDB, inventory spreadsheets, Visio, Microsoft 365 (collaboration)

Standards ITIL v3 (2011), TOGAF 9.2

Practices Application portfolio assessment, risk matrix

Ecosystem Microsoft

CETRUS

P29 Ministry of Education Accreditation with a Top Score (5/5)

CETRUS · 2018 – 2019 · Strategy & Architecture

Role Executive technology focal point in the Ministry of Education accreditation

Scale 5 campuses · 450+ employees · 5.4K+ students per year

Challenge Accrediting the institution with the Ministry of Education to offer on-campus and digital courses, with the IT area under evaluation.

ACTIONS

- Prepared the institution for the Ministry of Education evaluation
- Complete overhaul of the technology environment, information security, digital accessibility and business continuity
- IT evidence organized for the evaluation committee

KEY DECISIONS

- IT treated as a strategic pillar of the accreditation
- Security and continuity as entry requirements

RESULTS

- Top score (5/5), directly supporting commercial viability and institutional reputation
- 100% of infrastructure and IT requirements met in the evaluation

STACK

Platforms e-MEC, INEP (regulatory process), academic and accessibility platforms

Standards ISO/IEC 27001:2013, WCAG 2.0 AA

Practices Evidence management, business continuity

P32 IT Governance, Risk and Information Security

CETRUS · 2016 – 2019 · Cloud, Security & Ops

Role Accountable for governance, risk and information security

Scale 5 campuses · 18 critical systems · 35 databases · BRL 4.5M/year (CAPEX and OPEX) · 45 contracts and 28 direct vendors

Challenge A healthcare education institution without structured IT governance, risk management and security to support growth and accreditation.

ACTIONS

- IT strategic planning and expansion and investment plan (CAPEX)
- Budget management and planning of technology and human resources
- Cost reduction (OPEX) through contract renegotiation, cloud and strategic outsourcing; management of 45 contracts with 28 vendors
- IT service management and governance, with processes, KPIs, policies and controls
- ISMS: access policies, information classification, data policy, risk management and compliance (ISO 27000 and Ministry of Education and Federal Council of Medicine regulations)
- Business continuity and contingency plan (BCP), considering SLAs and risks

KEY DECISIONS

- Governance through processes and KPIs, based on ITIL and COBIT
- Risk-based security and information classification
- Continuity by system criticality

RESULTS

- Governance and security as the foundation for the top accreditation score and the continuity of critical systems
- −34% cost through contract renegotiation
- RTO ≤ 4h and RPO ≤ 1h for critical systems

STACK

Platforms ITSM, monitoring, backup and DR tools

Standards ITIL v3 (2011), COBIT 5, ISO/IEC 27001:2013, ISO 22301:2012, ISO/IEC 20000-1:2011

Practices Risk management, continuity, vendor management

P39 IT Transformation — From Reactive Support to Strategic Partner

CETRUS · 2016 – 2019 · Leadership & People

Role Head of the entire IT structure — reorganization, planning and board relationship

Scale Development, infrastructure and networks, student and faculty support, BI and academic systems · 5 campuses · 450+ employees served · 20+ IT professionals

Challenge IT seen as reactive support, with no planning, KPIs or participation in the institution's strategic decisions.

ACTIONS

- Reorganized IT into workstreams (development, infrastructure and networks, support, BI and academic systems), with roles and KPIs
- IT strategic plan presented to the board
- Service catalog and SLAs for students, faculty and business areas
- Management rituals: monthly KPIs, prioritization committee and accountability to the board

KEY DECISIONS

- IT as a partner to business areas, with a jointly prioritized portfolio
- Service KPIs as the basis of the relationship with the board

RESULTS

- IT's perceived value raised with the strategic board — from reactive support to strategic partner
- Foundation for the top Ministry of Education accreditation score
- +30 p.p. user satisfaction with IT services

STACK

Platforms ITSM tools, Power BI (KPIs)

Standards ITIL v3 (2011), COBIT 5

Practices KPI-driven management, portfolio management, team leadership

Ecosystem Microsoft

P45 New Administrative and Academic Ecosystem

CETRUS · 2016 – 2019 · Platforms & Integration

Role Accountable for selecting, negotiating and implementing the systems ecosystem

Scale Administration, CRM, marketing, planning, BI, academic, telephony and video · 450+ employees · 5.4K+ students per year

Challenge Outdated, poorly integrated administrative and academic systems, with manual enrollment and certification processes.

ACTIONS

- Selected, negotiated and coordinated the rollout of the integrated ecosystem: SAP (ERP), Oracle RightNow (CRM), Oracle Eloqua (marketing), Oracle Hyperion (planning), Power BI/Lumira (BI), Lyceum and Moodle (academic), Avaya (telephony) and Cisco/Vimeo (video conferencing and streaming)
- Automated enrollment and certificate issuance
- Responsive student portal

KEY DECISIONS

- Integrated specialist platforms instead of a single suite
- Enrollment and certificate automation as the priority delivery

RESULTS

- Automated enrollment and certificates and a responsive student portal
- −60% enrollment time
- +15 points in student NPS

STACK

Languages SQL

Platforms SAP ERP, Oracle RightNow, Oracle Eloqua, Oracle Hyperion, Power BI, SAP Lumira, Lyceum, Moodle 3.x, Avaya, Cisco, Vimeo

Standards REST, SOAP, ETL

Practices Vendor management, change management

Ecosystem SAP, Oracle, Cisco, Avaya, Microsoft, Lyceum, Moodle

P47 Network and Infrastructure Modernization

CETRUS · 2016 – 2019 · Cloud, Security & Ops

Role Accountable for modernizing the infrastructure of the 5 campuses

Scale 5 campuses · 18 critical systems · 35 databases

Challenge Legacy, distributed infrastructure with outages, insecure networks and fragmented telephony.

ACTIONS

- Server virtualization with VMware and migration to the cloud (Oracle Cloud)
- Secure networks: academic and corporate Wi-Fi, VLANs, QoS, UTM/firewall, VPN and redundant links at every campus
- Modern telephony: VoIP, IVR and PBX integrated on Avaya Aura

KEY DECISIONS

- Virtualize before migrating, to reduce risk
- Redundant links at every campus
- Network segmentation by VLAN

RESULTS

- 99.9% uptime, with lower operating costs and greater efficiency and scalability
- Workloads migrated to Oracle Cloud, with 10TB+ of data

STACK

Platforms VMware vSphere 6.5, Oracle Cloud (OCI), Windows Server 2016, UTM/Firewall

Standards Wi-Fi 802.11ac, VLAN, QoS, IPsec VPN, VoIP (SIP)

Practices Virtualization, redundancy, segmentation

Ecosystem Oracle, Microsoft, Avaya, VMware

B2W Digital

P24 Global ITSM Platform Selection and ServiceNow Rollout

B2W Digital · 2010 – 2012 · Platforms & Integration

Role Lead for the global selection and rollout of ServiceNow — from RFP to go-live

Scale 25K+ end users · 1K+ IT professionals

Challenge Legacy ITSM platform, with a manual service desk and low service levels.

ACTIONS

- Assessed 20+ ITSM tools, ran an RFP with 118 requirements and a POC with 3+ finalists
- Specification, architecture design, implementation and configuration of ServiceNow
- Self-service portal and centralized knowledge base

KEY DECISIONS

- Selection by weighted criteria and a POC with real scenarios
- Self-service as the cost reduction lever

RESULTS

- BRL 1.8M/year in direct savings through service desk automation and self-service
- SLA from 47% to 89% in 90 days
- One of the first ServiceNow customers in Brazil (2012)

STACK

Languages JavaScript (Glide API)

Platforms ServiceNow, 2012 releases (Service Catalog, Knowledge Base)

Standards ITIL v3 (2011), REST, SOAP

Practices Self-service, RFP, POC

Ecosystem ServiceNow

P38 Process Automation Committee

B2W Digital · 2013 – 2016 · Strategy & Architecture

Role Creator and leader of the Process Automation Committee

Scale 25K+ employees · 1K+ IT engineers · dozens of automated processes

Challenge Manual, repetitive activities with high cost and execution time in one of Brazil's largest e-commerce operations.

ACTIONS

- Systematic identification, prioritization and automation of critical IT and business processes
- Governance of the initiative portfolio
- Measurement of cost and execution-time gains

KEY DECISIONS

- Prioritization criteria by gain, risk and effort
- Committee governance with executive sponsorship

RESULTS

- 63% reduction in operating costs
- 85% reduction in execution time for automated processes
- 20+ processes automated

STACK

Platforms ServiceNow (workflow, ITSM)

Standards BPMN 2.0, ITIL v3 (2011)

Practices BPM, continuous improvement, portfolio governance

Ecosystem ServiceNow

P42 IT Vendor Contract Optimization

B2W Digital · 2010 – 2016 · Strategy & Architecture

Role Manager of the IT contract and vendor portfolio

Scale 15+ contracts · 10+ strategic vendors · BRL 30M+/year in contracts

Challenge IT contracts with automatic renewals and no view of portfolio, TCO or service levels.

ACTIONS

- Management of the contract portfolio and strategic vendors
- Renegotiation at renewal based on SLAs, TCO and a portfolio view

KEY DECISIONS

- Renewal calendar planned in advance
- Market benchmarks as the basis for negotiation

RESULTS

- 47% direct annual savings on renewals
- −21% vendors per category

STACK

Platforms Spreadsheets, contract management tool

Standards SLA, OLA, TCO, ROI

Practices Negotiation, vendor management

P43 IT Governance Framework and Service Catalog

B2W Digital · 2010 – 2013 · Strategy & Architecture

Role Accountable for IT governance, the service catalog and the service desk

Scale 25K+ employees · 1K+ IT professionals · 2.5K+ service items (IT, HR, procurement and facilities)

Challenge Unstructured IT governance and service catalog, with no consistent SLAs, OLAs or KPIs.

ACTIONS

- Restructured the service catalog with SLAs, OLAs, workflows and KPIs
- Maturity assessment (ITIL, COBIT, ISO 20000 and ISO 27000) to prioritize initiatives
- Redesigned service desk processes (L1, L2 and L3; critical incidents, problems and changes — CAB)

KEY DECISIONS

- ITIL as the process foundation and COBIT as the control foundation
- A single catalog for IT and business areas

RESULTS

- KPI-driven governance and a structured catalog, with SLA from 47% to 89% in 90 days
- −25% recurring incidents

STACK

Platforms IBM Maximo 7, ASK Business Desk (legacy), Nagios, SharePoint 2010

Standards ITIL v3 (2011), COBIT 4.1 → 5, ISO/IEC 20000-1:2011, ISO/IEC 27001:2005

Practices Service management, change management, continuous improvement

Ecosystem Microsoft, IBM, ASK Business Desk

P48 ITIL Processes and IT Configuration and Asset Management

B2W Digital · 2009 – 2010 · Strategy & Architecture

Role Accountable for ITSM tools and the rollout of ITIL processes

Scale 25K+ employees · 1K+ servers · 10K+ workstations

Challenge A large IT operation with poorly standardized service processes and fragmented legacy tools.

ACTIONS

- Rolled out ITIL processes for service operation, change and release management, and IT configuration and asset management
- Evolved incident management and request fulfillment
- Reviewed the IT service catalog: SLAs, OLAs, workflows and approval levels
- Administered IBM Maximo, ASK Business Desk, Redmine, Nagios and SharePoint
- Assessed 20+ ITSM tools, laying the groundwork for the later choice of ServiceNow

KEY DECISIONS

- Process before tools: standardize ITIL before replacing the platform
- Configuration and asset base as a prerequisite for controlled changes

RESULTS

- Core ITIL processes in place, preparing operations for the move to ServiceNow
- −53% change-related incidents
- −68% recurring incidents after problem management was introduced to address root causes
- 82% of critical IT assets registered in the configuration base

STACK

Platforms IBM Maximo 7, ASK Business Desk, Redmine, Nagios, SharePoint 2007/2010

Standards ITIL v3, ISO/IEC 20000

Practices Change management, configuration management, continuous improvement

Ecosystem ServiceNow, Microsoft, IBM, ASK Business Desk

Lan Designers

P52 Submarino + Americanas Merger — Logistics IT Migration and Support

Lan Designers · 2007 – 2008 · Cloud, Security & Ops

Role IT support supervisor for the logistics operation during the merger

Scale Submarino logistics operation · team of 8 to 12 people

Challenge The merger of Submarino and Americanas (which created B2W) required migrating users and resources without interrupting the logistics operation.

ACTIONS

- Supervised IT technical support
- Migrated user accounts and resources: mailboxes, corporate systems, printing, industrial automation, telephony and data center
- Logistics industrial automation (sorter), wireless network, new invoicing lines and data collector modernization projects

KEY DECISIONS

- Wave-based migration in low-impact windows
- Critical logistics resources prioritized

RESULTS

- Resolution SLA from 45% to 92% during the merger
- 100% of accounts migrated with no interruption to operations

STACK

Platforms Windows Server 2003/2008, Active Directory, Exchange Server 2003/2007, industrial automation (sorter), Wi-Fi 802.11g/n, data collectors

Standards ITIL v3

Practices Service desk, change management, wave-based migration

Ecosystem Microsoft

P53 IT Process Automation with ASK Business Desk

Lan Designers · 2008 – 2009 · Platforms & Integration

Role ITIL process automation specialist on ASK Business Desk

Scale Large clients: Deutsche Bank, Rabobank, 3G Capital, Banco Votorantim and others · 10+ implementations

Challenge Financial, retail and services clients with manual IT processes and no ITIL standardization.

ACTIONS

- Mapped and automated ITIL processes: incidents, problems, changes and releases, service configuration and assets, and request fulfillment
- Implemented and administered ASK Business Desk, from requirements to training and support
- POC and POV environments for pre-sales and prospecting
- Technical and operational documentation and executive KPI books

KEY DECISIONS

- ITIL as the standard IT process library
- POC/POV as a tool to support evaluations and approvals

RESULTS

- Processes automated at large clients, plus POC/POV environments supporting pre-sales and prospecting

STACK

Languages SQL

Platforms ASK Business Desk, SQL Server 2005/2008, Windows Server 2003/2008

Standards ITIL v3

Practices Process automation, POC/POV, training

Ecosystem Microsoft, ASK Business Desk

Paterno

P55 Server and Network Infrastructure Build-out

Paterno · 2006 – 2007 · Cloud, Security & Ops

Role Accountable for the data center — building and administering servers and the network

Scale 40+ contact center seats · 10 administrative managers · 4 executives (VIP)

Challenge A collections and legal services operation with no structured server and network infrastructure to support the contact center.

ACTIONS

- Built and administered servers: file, domain (Active Directory), database (SQL Server), network services (DHCP, DNS and IIS), CCTV monitoring and telephony
- Terminals and workstations
- Standardized access profiles and technical and operational documentation
- High-availability internal network and redundant external links

KEY DECISIONS

- Access control through standardized profiles
- Redundant external links

RESULTS

- High-availability server and network infrastructure supporting the entire operation
- 99.5% network availability

STACK

Languages SQL, Shell Script, PowerShell

Platforms Windows Server 2003, Active Directory, SQL Server 2000/2005, IIS 6.0, DHCP, DNS, CCTV

Standards TCP/IP, VLAN

Practices Access standardization, documentation, redundancy

Ecosystem Microsoft

P56 Collections and Correspondence Data Processing Automation

Paterno · 2006 – 2007 · Cloud, Security & Ops

Role Accountable for the data center — automation of collections data processing

Scale Collections and legal services portfolios · tens of thousands of records per cycle · 40+ contact center seats managed

Challenge Manual data generation for correspondence and billing queries, with a risk of errors and delays in collection cycles.

ACTIONS

- Bulk data generation for correspondence (collection letters) from client portfolios
- Queries and extracts for billing and the contact center
- Standardized, scheduled processing routines

KEY DECISIONS

- Scheduled, standardized routines instead of manual extracts

RESULTS

- Faster and more reliable correspondence and billing cycles
- −60% time to prepare collection batches

STACK

Languages SQL

Platforms SQL Server 2000/2005, Microsoft Office (mail merge)

Standards Batch processing

Practices Routine automation, data processing

Ecosystem Microsoft

Kioske Fazendinha

P57 Business Computerization and Digital Presence

Kioske Fazendinha · 2004 – 2006 · Digital Products

Role IT intern — computerization and digital presence of the business

Scale Small business · website, local network and digital campaigns

Challenge A business with no computerization, structured network or digital presence.

ACTIONS

- Set up the website and social media presence
- Computerized the business and configured the local network
- Digital contracts, business cards and promotional materials
- Digital campaigns to attract customers

KEY DECISIONS

- Own digital presence (website) combined with social media

RESULTS

- Business computerized and present online
- +20% new customer contacts from digital campaigns

STACK

Languages HTML, CSS

Platforms Windows XP, local area network (LAN), design tools

Standards TCP/IP

Practices Digital marketing, technical support

Ecosystem Microsoft

Congregação Cristã no Brasil (volunteer)

P41 Multiplier Network and Regional Support Model

Congregação Cristã no Brasil (volunteer) · 2016 – Presente · Leadership & People

Role Volunteer IT manager — support model and training of multipliers

Scale 6 administrative units · 90+ churches · hundreds of users · 20+ trained multipliers

Challenge IT support for a broad network of units and churches, with a small volunteer team and users with varying levels of technology familiarity.

ACTIONS

- Tiered support model: local multipliers, regional team and specialists
- Ongoing training of knowledge multipliers
- Knowledge base and support scripts
- Management of the region's ICT services

KEY DECISIONS

- Local multipliers as the first support tier
- Simple, accessible knowledge base

RESULTS

- Scalable support for hundreds of users with a volunteer team
- −50% tickets escalated to the regional team

STACK

Platforms Microsoft 365, Microsoft Teams, SharePoint Online

Standards ITIL 4 (reference)

Practices Training, knowledge management, tiered support

Ecosystem Microsoft

P44 Regional IT Master Plan — Embu das Artes Region (volunteer)

Congregação Cristã no Brasil (volunteer) · 2020 – Presente · Strategy & Architecture

Role Volunteer IT manager — preparation and execution of the regional IT master plan

Scale 6 administrative units · 90+ churches · 20+ roadmap actions · 20+ trained multipliers · 300+ collaboration users

Challenge A region with many units and volunteers and no IT strategic planning, security policy or governance model.

ACTIONS

- Assessment of the current environment and a strategic technology vision
- Infrastructure roadmap and information security policy
- Multiplier training plan
- Governance model

KEY DECISIONS

- Corporate methodology adapted to a volunteer context
- Knowledge multipliers to scale support

RESULTS

- Corporate planning methodology applied in a high-social-impact volunteer context
- 100% of units with the security policy adopted

STACK

Platforms Microsoft 365, Azure

Standards COBIT 2019, ISO/IEC 27001:2022 (security policy)

Practices Strategic planning, training, governance

Ecosystem Microsoft

P49 Regional IT Asset, Procurement and Audit Management (volunteer)

Congregação Cristã no Brasil (volunteer) · 2016 – Presente · Strategy & Architecture

Role Volunteer IT manager — assets, procurement, vendors and audits

Scale IT assets of 6 units and 90+ churches · vendors and partners · internal and external audits

Challenge Distributed IT assets and purchases without standardized specifications, with accountability required in audits.

ACTIONS

- IT asset inventory and lifecycle management
- Technical purchasing specifications and equipment standardization
- Vendor and partnership management
- Response to internal and external audits

KEY DECISIONS

- Standardized equipment to reduce support costs
- Inventory as the single source for audits

RESULTS

- Assets inventoried and auditable
- −20% acquisition cost with standardized specifications
- Audits passed with no relevant findings

STACK

Platforms Spreadsheets and an inventory tool, Microsoft 365

Standards ITIL 4 (asset management)

Practices Asset management, procurement, audit

Ecosystem Microsoft

P50 Hybrid Infrastructure and Collaboration — Azure and Microsoft 365 (volunteer)

Congregação Cristã no Brasil (volunteer) · 2023 – 2024 · Cloud, Security & Ops

Role Volunteer IT manager — integration of Azure and Microsoft 365 services

Scale 6 administrative units · 90+ churches · 300+ collaboration users

Challenge Collaboration limited by scattered tools and on-premises infrastructure, with no cloud backup.

ACTIONS

- Integration and use of Azure and Microsoft services: cloud services, cloud backup, SharePoint Online and Office 365
- Integration with the Windows and Linux server estate (virtualization, domain and file server), networks, switches, routers and firewalls

KEY DECISIONS

- Hybrid: critical data on premises with cloud services for collaboration and backup
- Single identity (Entra ID) for access

RESULTS

- Faster collaboration across teams, with cloud services, backup and content integrated into the hybrid environment
- RPO ≤ 24h with cloud backup

STACK

Languages PowerShell, Bash

Platforms Azure, Microsoft 365 (SharePoint Online), Windows Server 2019/2022, Linux (Ubuntu LTS), virtualization

Standards SMB, OAuth 2.0/OIDC (Entra ID)

Practices Cloud backup, single identity, collaboration

Ecosystem Microsoft

P51 Headquarters Governance, Architecture and Security Committee (volunteer)

Congregação Cristã no Brasil (volunteer) · 2021 – 2022 · Strategy & Architecture

Role Invited member of the headquarters committee (NURTIC) — governance, architecture and security standards

Scale Brás headquarters and regions · invited by the IT Governance team (NURTIC) · standards decisions for the whole country

Challenge National technology, architecture and security standards were needed for a volunteer organization with many units and regions.

ACTIONS

- Participation in headquarters decisions on governance, architecture and information security
- Contribution to infrastructure, collaboration (Microsoft 365) and access control standards
- Review of regional initiatives for compliance with headquarters standards
- Rollout of the standards to the Embu das Artes region

KEY DECISIONS

- National standards with regional adaptation
- Security and access control as minimum requirements for new solutions

RESULTS

- Region aligned with national governance, architecture and security standards
- 100% of regional initiatives assessed against headquarters standards

STACK

Platforms Microsoft 365, Azure, Microsoft Entra ID

Standards ISO/IEC 27001:2022 (reference), LGPD

Practices IT governance, risk management, standardization

Ecosystem Microsoft

P54 Local Unit Administrative and Financial Management (volunteer)

Congregação Cristã no Brasil (volunteer) · 2008 – 2020 · Leadership & People

Role Volunteer administrative contributor — costs, finance, projects and volunteers

Scale Unit BR-22-3001 · 12 years · dozens of volunteers

Challenge Running a local unit with limited resources and dependent on volunteer work.

ACTIONS

- Cost control, cash flow and accounting records
- Project and logistics management for the unit
- Volunteer management

KEY DECISIONS

- Simple, auditable financial controls

RESULTS

- 12 years of continuous administrative and financial management of the unit
- Regular, auditable accountability

STACK

Platforms Spreadsheets and financial control tools

Standards Financial accountability

Practices Financial management, project management, volunteer management
